GIFT FROM THE GODS

GIFT FROM THE GODS

"The Power of Destiny"

- Number 1 Blockbuster from the "MEGA TEAM"®
- Spectacular arcade – adventure played in a multitude of ways and at many different levels.
- Watch the Secrets of the Labyrinth unfold as our Hero, ORESTES, tests his skill against the power of GOD and MAN.
- Stunning animated graphics take you beyond time ... into the "FIFTH DIMENSION".
- "INTELLIGENT" controls allow ORESTES to perform an astonishing repertoire of feats from the command of joystick or keyboard.
- Discover the key to "AGAMEMNON'S puzzle, through the power of Intrigue and Illusion!

Ocean Software is available from selected branches of: **WOOLWORTH**, WHSMITH,  John Menzies, LASKYS, Rumbelows, **COMET**, Spectrum Shops and all good software dealers. Trade enquiries welcome.

FEATURES

- 58 COMPETITION** Take a voyage through life with Automata.
- 64 SCOTT EXPEDITION** The QL travels to the South Pole.
- 73 MASS STORAGE** We assess disc systems for the Spectrum.
- 165 MENU DRIVEN PROGRAMS** Basic architecture.
- 172 INSIDE SINCLAIR** Meet Sir Clive's software queen.

Southern Quest, page 64

REGULARS

- 12 SINCLAIR SIMON** Our hero hacks his way to fortune.
- 15 GREMLIN** Trouble in the jacuzzi, as Aneka reveals all. We think you should be told.
- 25 HARDWARE WORLD** Kappa keyboard, AGF interface.
- 31 SINCLAIR SURGERY** Tips to solve hardware troubles.
- 37 SPECTRUM SOFTWARE SCENE** Storm, saga and sidhe among the latest Spectrum games.
- 79 QL SOFTWARE SCENE** Psion's first QL game puts the rest in check.
- 122 ADVENTURE** Richard Price comes to terms with reality on a trip to Hampstead.
- 129 BOOKS** Pascal in Baker Street, software in the bank.
- 138 HIT SQUAD** Chris Bourne pans for gold and strikes lucky with the ZX-81.
- 149 SINCLAIR BUSINESS USER** Stocks and shares, software upgrades, plus shop window and letters.
- 157 EDUCATION** A close look at the new range of educational software from Longmans.
- 189 HELPLINE** Andrew Hewson on LOAD and SAVE routines.

3D QL classic, page 79

Lost in Scarthorpe, page 122

Gold rush of '81, page 138

PLUS

- 5 SINCLAIRVOYANCE** Where is Sinclair going next?
- 9 NEWS** Hacking the prince, selling the Spectrum+.
- 14 NEXT MONTH** Great free gift for February.
- 19 LETTERS** Another blast from the *Sinclair User* soapbox.
- 29 SUBSCRIPTIONS** The best way to make sure of your copy.
- 54 TOP 30** The latest charts of software bestsellers.
- 83 CROSSWORD** Silicon clues to tease your brain.
- 89 PROGRAM PRINTOUT** Set sail for the New World.
- 181 STARTERPACK** Basic help for the novice programmer.
- 191 CLUB CORNER** Lists of clubs throughout the world.
- 195 SOFTWARE DIRECTORY** The unique guide to software.
- 201 HARDWARE DIRECTORY** Spare parts and repairs.

LEGEND

DAVID GEMMELL

This superb role-playing fantasy game will stretch your adventuring skills to the limit. It's based on the bestselling novel *Legend* by David Gemmell and contains not one but two massive games for the 48K Spectrum.

Try it for yourself. Adventuring will never quite be the same again.

The pack contains:

- * Cassette containing both programs
- * The book
- * Four-colour poster-size map of the land of Drenan
- * Full instructions

NS

A YEAR AGO *Sinclairvoyance* speculated on Sinclair's expected move into the business market and the continuing success of the Spectrum. Events in 1984 confirmed both, though no-one could have anticipated the eccentric mishandling of the QL and the subsequent caution with which that machine was to be regarded by manufacturers and buyers alike. At the beginning of 1985 it is still uncertain whether the QL will sell in the quantities hoped for by Sinclair research, and which will justify large investment by software houses. The advent of disk drives, expansion boards and applications software from Quest is just one sign amongst many that the QL is nevertheless ready for lift-off.

What is more uncertain is the future of the Spectrum. Had not the Spectrum+ appeared, things would have looked decidedly dicey for our old friend. With Commodore, Amstrad, MSX and others prepared to slog it out in 1985 it is difficult to see how Sir Clive would have retained his market share.

The Spectrum+ might have changed all that. Internally the same as its little sister, it is an altogether different beast. In discarding those putty rubber keys Sinclair has transformed a games machine into an inexpensive and viable alternative to its rivals. Programming becomes faster and, once you have become accustomed to the all-white key legends, easier. Sensible word-processing is within reach. No more feats of dexterity to sample the dubious delights of inverse video, no more tugging and wiggling at that worn power lead...

Even more attractive is the inclusion in the price of a slightly different version of the Spectrum Six Pack, intended to always accompany the Spectrum+, something which Sinclair did not make clear when the machine appeared. That software is worth more than £50.00 and consequently the £179.95 price for the Plus is not as exorbitant as it seems at first glance.

That leaves the old 48K, minus the now-discontinued software promotion, looking rather sorry for itself and it is inevitable that many potential customers will buy the Plus in preference. Sinclair Research hopes of course, that it has not merely split the market share it already has but in addition stolen some from Commodore and chums as well. Any price reduction in the 48K is again likely to increase that share without reducing sales of the Spectrum+ to any large extent. In other words, Sinclair has covered all the bases and is simply waiting for the away team to pitch. It can't fail to score.

Sinclair has further tricks up its lab coat sleeve. Whispers abound that the Plus might be further upgraded to take onboard the Interface 1 and even a cartridge slot. The basis

for that speculation seems to be little more than the fact that the Plus was codenamed *Thunderbird*, and, as the ageing ones amongst us will know, there were five *Thunderbird* craft in the TV series. Nigel Searle has kicked that one into touch by explaining that the designer was a Ford Thunderbird fanatic, though he hasn't ruled out the possibility of upgrades.

Sir Clive too has been unusually garrulous on the shape of things to come, waxing lyrical about a portable in the pipeline. The portable micro will be battery-powered and incorporate microdrives. It will also have a flat-screen display — but then he said that when the QL was in planning.

The Spectrum Plus Handle, or the QL Minus, will retail at about £300. But don't hold your breath waiting: Sir Clive has said that it will appear in 1985, probably late 1985 — well, possibly 1986. Or even...

Despite all the carping about Sinclair's achievements there is no doubt they are rock-solid in the final analysis. One company to recognise that is ICL, and in announcing its OPD executive toy has signalled a new departure for Sinclair.

The OPD — One Per Desk — is a nifty combination of monitor, keyboard, microdrives and telephone handset which is the ultimate businessman's tool. It offers all the QL software and an amusing built-in speech synthesiser with 200 words for leaving rude messages on your telephone. It can do much more besides, but what interests us is the presence of Sinclair chips, microdrives and Basic in the design. Not only is the OPD an innovative approach to desk-top computers but it is the first time that Sinclair has been

heavily involved with the product from another major company.

Lest you feel that in reaching for the business sky Sinclair Research might have neglected its down-to-earth home users, rest assured: it seems that the Spectrum+ has been bedevilled with the kind of teething problems Sinclair followers have come to expect and fondly treasure.

Some units have 'slipped' through Sinclair's QC net and a few fortunate users have discovered that not only are the keys a great improvement on their plasticene predecessors but are detachable as well. Some machines arrived with assorted keys scattered around the packaging like so many Scrabble tiles.

Middle Eastern carpet weavers used to incorporate deliberate flaws in their designs because only Allah could create anything perfect. Perhaps the distinctive Sinclair bugs and design faults are Sir Clive's errors of humility — his personal, desperate attempt to avoid hubris.

Bill Scolding

THINGS TO COME

EXPLORING THE SENSE OF SOUND!

3 Channel Sound Synthesizer

Any microcomputer is capable of manufacturing sound, however in order to produce a single octave 'C' note with a frequency of 8372 Hz the signal needs attention over 16,000 times per second.

To produce software capable of performing just this one task would be difficult if not impossible, especially when you consider that to produce arcade type sound effects require even greater attention.

The production of these sound effects without the constant attention of the processor is now possible thanks to the AY Sound Chip, its flexibility makes it essential for a wide range of applications including music synthesis and sound effects generation, continuing the monitoring and production of sound after the initial command. More often than not realistic sounds require more than one effect and this function is provided by 3 independently controlled channels, as an example, compare the sound produced by the single note of C, with that produced by the chord 'C' and you will know just what I mean, likewise producing the sound of an explosion using all 3 channels gives games a totally new dimension.

Add to this the ability to alter the pitch tone and shape of the sound you have produced and it's flexibility is unlimited. In simple terms, imagine the note you have produced as a calm sea, by altering the pitch and shape you can produce waves, the top of the wave corresponds with the maximum volume and pitch of the note, which like the wave itself rises and falls.

Free Music Designer Cassette Worth £9.95

Beethoven to Bowie – Starwars to Splats.

The screen display shows all functions. Simply move the cursor along the keyboard, select the desired note by pressing the fire button and the note selected then appears on the screen.

You can vary the tempo/volume and when 'played' the notes simultaneously scroll across the screen. 10 Envelope controls mean that once created, tunes and sounds can be subtly altered given varying attack and decay times to create futuristic music and sound effects. You can record and save up to three different tunes and amend each one as necessary. The dk'tronics Sound Synthesizer is suitable for both Spectrum and Spectrum + models and is guaranteed to give you hours of fun and would make an ideal Christmas gift, you never know you might turn to be another Stevie Wonder.

A THROUGH CONNECTOR ON THE REAR OF THE INTERFACE ALLOWS YOU TO PLUG IN OTHER PERIPHERALS LIKE THEIR CENTRONICS & JOYSTICK INTERFACES.

ALL FUTURE SOFTWARE RELEASES STARTING WITH 'POPEYE' WILL EXPLOIT THE FULL POTENTIAL OF THIS NEW PRODUCT.

At only £29.95 it comes complete with FREE music designer cassette worth £9.95 and represents remarkable value for money.

Available from department stores and good computer shops everywhere or direct from

dk'tronics, Saffron Walden, Essex CB11 3AQ. 1SU
Tel. (0799) 26350. Add £1.25 post and packing.

HORIZONS

SPECTRUM

Digital Sound Sampling Technology. NOW Available on your Spectrum

Complete unit and Software Package
£49.99 POST FREE

• Digital Sound Sampling has only previously been available for large micros and costing at least 10 times the amount. • The Sound Sampler allows you to record "Digitally" any sound into memory and instantly replay it at any pitch, forwards, backwards, ascending scale, compressed, expanded, with echo, endlessly looped etc. • Supplied complete with Software package to facilitate the above operations, plus on screen "Voice Prints" + Frequency Plotting. • With on screen keyboard + drum kit a whole symphony could be produced from a single Sample Sound. • This is a professional unit featuring 8 Bit D to ADC converters as used in Digital equipment now sweeping the music world. • Although the unit is not a toy, giving truly astounding results for the musically inclined, we have incorporated a games interface to allow you to use Sound Sampling in your own games etc., so the Sound Sampler would be of interest to everyone.

NOW! You can connect your Spectrum to a full sized printer...

ONLY **£34.99** POST FREE

• The Dattel Interprinter is a Centronics Interface which allows the Spectrum to be connected to a whole range of full sized printers. • Comes complete with connecting cables and 36 way plug to fit most printers including Epsoms, Seikoshas, Star, Tandy, Shinwa etc. • Complete with software to generate text copies plus additional software to facilitate hires screen dumps. • The Interprinter plugs straight into the expansion port. • Available Now!

SPECTRUM

ONLY **£34.99** POST FREE
**THE ULTIMATE
SPEECH
SYNTHESIZER**
Plus built in
Joystick Interface

• Easily program any word from a unlimited vocabulary. • Joystick Interface accepts any standard type (Kempston compatible) including Rapid Fire. • Also boosts Spectrums sound through your TV. • All in one unit, no messy wires. • Available Now!

NOW! ROBOTICS + MODEL CONTROL MADE EASY FOR YOUR SPECTRUM

ONLY **£29.99** COMPLETE POST FREE

• The Dattel Robotek is an all in one controller which connects your Spectrum to the outside world. • 4 independantly controlled outputs can be connected to robots, models etc. to give full direction control. • 8 independant sensing channels give constant "feedback" to your micro making possible "artificial intelligence" and the ability to adjust to its environment. • Programming is very easy using only a few basic commands. • Other applications including sophisticated security and domestic uses are endless. • Supplied complete with connecting cables & full instructions. • Available Now!

SPECTRUM

Now you can create Superb Graphics easily with the New

Lightwriter

ONLY **£16.99** POST FREE

Lightpen comes
complete with
Interface & Software

• Just plug in the Dattel Lightwriter and draw circles, squares, rectangles, make superb hand drawings, paint, fill, erase, choose inks, paper, colours. • Save your results into memory (48K) and use in animation or save onto tape to use in your own games. • All functions selected from screen menu with the lightpen. • Unbeatable value. • Nothing more to buy.

SEND NOW AVAILABLE FOR IMMEDIATE DELIVERY

NEW ALL SYSTEMS GO!! SWITCHABLE JOYSTICK INTERFACE

With built in Sound Booster
for "On Screen" sound

ONLY **£22.99** POST FREE

UNBEATABLE VALUE MULTI-FEATURE UNIT!

The TURBO ACE gives maximum joystick compatability by simply switching through all systems ie, Kempston, Cursor, Interface 2. • The all in one unit also features an Amplifier which delivers the sound from your games etc., directly through your T.V. (also gives keyboard click which helps when typing data etc.). • These features make the TURBO ACE the number one add on for the games player. • Accepts any 'Atari' compatible joystick. • Available now.

SPECTRUM

The ultimate add on for the keen
games player!

**Joystick Interface
Plus Spectrum
Soundbooster**
Actually Amplifies through
your TV Speaker

ONLY **£17.99** POST FREE

FEATURES INCLUDE

• Joystick interface compatible with a huge range of games (Kempston system) • Compatible with any Atari type joystick including auto rapid fire models. • Amplifies Spectrums 'Beep' into a roar through your TV speaker! (fully controllable). • Stylish all in one unit, no messy wires. • Available Now!

At last, the first joystick that puts the firing button where it should have been in the first place.

**THE TOP AMERICAN
JOYSTICK IS
NOW AVAILABLE
IN THE U.K....**

£19.99 ONLY POST FREE

• Including Interface to plug straight into the Spectrum. • The first Joystick to give you "Arcade" feel and control. • "Jet Style" heavy duty, diamond cut grip. • Fire Trigger placed under your index finger... the finger with the fastest reflex action. • Self centering, 360° action. • Compatible with most of the latest Software (Kempston system).

POOLSWINNER

THE ULTIMATE POOLS PREDICTION PROGRAM

- **MASSIVE DATABASE** Poolswinner is a sophisticated Pools prediction aid. It comes complete with the largest database available — 22000 matches over 10 years. The database updates automatically as results come in.
 - **PREDICTS** Not just SCOREDRAWS, but AWAYS, HOMES and NO SCORES.
 - **SUCCESSFUL** SELEC guarantee that Poolswinner performs significantly better than chance.
 - **ADAPTABLE** Probabilities are given on every fixture — choose as many selections as you need for your bet. The precise prediction formula can be set by the user — you can develop and test your own unique method.
 - **SIMPLE DATA ENTRY** All English and Scottish team names are in the program. Simply type in the reference numbers from the screen. Or use FIXGEN to produce fixture list automatically (see below).
 - **DISC/MICRODRIVE COMPATIBLE** All versions (except Apple and IBM) are supplied on tape, with simple instructions for disc/microdrive operation.
- (This seasons results are supplied with the package so that predictions can start immediately.)
- AVAILABLE FOR Spectrum (48K), Commodore 64, VIC 20 (+16K), AMSTRAD CPC 464, BBC B, Atari (48K), ZX81 (16K), Dragon, Apple II, IBM pc

Boxed, with detailed instruction booklet

PRICE £15.00 (all inclusive)

FIXGEN 84/5

AT LAST! No more struggling for hours to get the fixture list into the computer. FIXGEN has been programmed with all English and Scottish fixtures for 1984/5. Simply type in the date, and the full fixture list is generated in seconds. Fully compatible with Poolswinner.

POOLSWINNER with FIXGEN £16.50 (all inclusive)
Fixgen alone £5.50

COURSEWINNER v3
THE PUNTERS COMPUTER PROGRAM

Coursewinner is designed to allow you to develop and test your own unique winning system. Using information from daily newspapers or 'Sporting Life', the most important factors can be input and analysed. The program is supplied with a database detailing best trainers and jockeys, and effect of the draw for all British courses. (Flat & National Hunt.)

AVAILABLE FOR Spectrum (48K), Commodore 64, BBC (B), Dragon, Atari (48K), Apple II

Friendly users

IF YOU WANT to communicate with ZX-81 users worldwide, now is your chance.

ZX Exchange is a group of users dedicated to the ZX-81 and companion machines, TS-1000 and TS-1500. A newsletter, the *ZX Broad-sheet*, is circulated at approximately bi-monthly intervals to users as far away as Hong Kong, Mexico and Australia.

The *ZX Broadsheet* covers the main areas of interest to ZX-81 users with routines as its main feature. Exchange Profile is a column in which people can talk about themselves, their interests, equipment and exchange information with other users.

If you would like to participate in this international user club you can obtain a trial issue of the newsletter by sending £0.60 (UK) or five International Reply Coupons to Nick Godwin, 4 Hukur Crescent, Eyemouth, Berwickshire, Scotland TD14 5AP or telephone Nick on Eyemouth (0390) 50965 between 10am and 10pm.

Plus teething problems

THE SPECTRUM+ is only going through some minor 'teething problems' according to Sinclair Research, despite the fact that on some machines the keyboard falls to pieces.

Julian Goldsmith, of Sinclair Research, says: "With any new products there are bound to be problems. The suppliers are AB Electronics, Thorn EMI and Timex. If there is a problem and we hear complaints then we just talk to the suppliers and get them to make the glue thicker

or add a millionth of a millimeter to the clip-on part of the keyboard. We have had complaints about the keyboard and of course we will take note of them."

Should problems occur with your Spectrum+ you are advised by Sinclair Research to take it back to the place of purchase. "The main responsibility, of course, is with us," Goldsmith admits. "Most retailers do their own QCing and we leave it to them to spot faulty machines.

Retail stores, such as

Boots, are moaning because they cannot get enough of the Spectrum+. All the company would say is, "they are selling very well".

WH Smith is also not getting enough of the machines. A spokesman at one London branch commented that despite the slow start they had no problems with returns. They wished only that they could get a few more machines.

The tale at Smiths was repeated at The Buffer Micro Shop. Michael Howard, owner, says: "The only problem we have is getting the Spectrum+. We were late in ordering by one day and chain stores such as Smiths got all of them". That was the first delivery made and, at the time of writing, there had not been another one.

If you are still in a dilemma about what to do if your Spectrum+ keyboard falls to bits then Sinclair Research has had a suggestion passed on. Start chewing a lot of gum.

Sinclair admirer

THOSE microdrives have gained one ally in the form of ICL which has launched a computer called One Per Desk.

The machine, uses the QL circuit board, which includes the Sinclair ULA, with microdrives and includes a modem, terminal emulation software and monitor.

ICL is taking the Sinclair Research lead and supplying the Psion XChange software

suite, with upgraded versions of Quill, Archive, Abacus and Easel, on in-built ROM in the package which is to sell for £1,200.

Sinclair Research is pleased that ICL has delivered its well-timed pat on the back for its pioneering stance in computing. A spokesman for the company says: "It is nice to see that other people are endorsing our technology."

Supporting role for Quest

A NEW RANGE of QL packages from Quest Automation turns the Sinclair machine into a powerful business microcomputer.

The software is headed by a 68K version of the CP/M, specially designed for 68000 processors. The 28.5K operating system is supplied either on 5¼in floppy disc for £49.50 or microdrive cartridge for £79.50. It includes an assembler, co-resides with QDOS and will support 3in, 3½in, 5¼in and 8in floppy discs. It can also be used with a Winchester disc unit.

Quest is also supplying a range of disc drives on which CP/M can be run. Those range from a 200K floppy at £249 to a range of Winches-

ter discs, minimum storage 7.5 megabytes, which starts at £995.

If extra internal RAM is required Quest can supply a range starting with 68K for £99 to half-megabyte at £499. All the equipment can be stored in an expansion console costing £109.

To support its new system Quest has released two busi-

ness packages, collectively called Tally.

The software is compatible with the Psion packages supplied with the QL which means that data can be transferred from the Quest packages to the Psion programs and vice versa. Quest says that it is a deliberate ploy which will be continued.

Wildest dream is fulfilled

SOMETHING you would never have thought of in your wildest dreams is renting software on a nightly basis.

A new company calling itself Wildest Dreams came up with the idea whilst discussing the problems of producing and distributing software. The games were to be available for rental in video shops nationwide from November, for the princely sum of around 50p per night.

The games are all new and will be for rental purposes only.

Asked about the subject of piracy, the company says, "Piracy occurs because people are loath to pay around £7.00 for a games tape, whereas 50p is a low enough margin to discourage piracy."

more news on page 10

Hacker's lèse-majesté

IF THE Duke of Edinburgh's Prestel Account can be broken into, think what fun a hacker could have with the Stock Exchange prices.

The latest exploit to reach the national newspapers and make Prestel tremble in its shoes is that of a hacker claiming to be a freelance writer of Micronet 800 — an information database and, ironically, part of the Prestel system.

Prestel received a telephone call recently asking staff to look at Page 1, Prestel's index page, accessible to only a few members of the Prestel team. INDEX was spelt IDNEX. The hacker had broken in.

Breaking into the system via one of the Prestel Development computers he found the identity number and password of Prestel's Assistant Editor. With that information he had enough ammunition to break into the system, call up anybody's ID and password and access any page on the database.

He decided to aim for the top, accessed the Duke of Edinburgh's Prestel account

and had the time of his life sending messages from people who, at the time, were fast asleep — it being the early hours of the morning.

One message was sent from the Duke of Edinburgh to the General Manager of Prestel congratulating him with, "The household is very impressed with your work."

Another area cracked was Homelink — Prestel's home banking system where users holding accounts at the Nottingham Building Society and the Bank of Scotland can access accounts from home.

Two weeks after Prestel was bugged, Homelink sent

out a message reassuring its customers that though Prestel had been hacked, the Homelink database was unbreachable. "Rubbish", came back the reply, "the Homelink database was broken into". It was signed by The Hacker using the Bank of Scotland ID.

Two weeks after the Prestel incident Homelink still had not changed the ID numbers and passwords.

Prestel got the message immediately and has made all the necessary security changes. One wonders, though, when and where the hacker will strike next.

Nordic cleans up

NORDIC KEYBOARDS, them."

the company which has acquired the Fuller range of products after it went into liquidation a few months ago is trying to make amends to frustrated customers owning Fuller keyboards.

John Gray of Nordic Keyboards says he is delighted with the opportunity to market the products and adds, "but we aim to offer our customers a better deal and to be faster on both service and delivery."

A problem has arisen over faulty keyboards returned to Fuller before they went into liquidation.

"It is a knotty problem," says Gray, "because of Fuller's records. We have a lot of keyboards awaiting repair but without any attached documentation. As we come across keyboards with the owners' names and addresses we'll repair and return

On a more optimistic note, Nordic have launched the FDS Executive, a replacement keyboard for the Spectrum. The Executive allows the user to plug his Spectrum straight into the keyboard without having to unscrew the Spectrum case and at only £59.95, Nordic believe it will be a winner.

Joysticks recall

AGF are anxious that some early customers who purchased Protocol 4 joystick interfaces may have sub-specification pre-production units.

The problem with those units is that they have an erratic or unreliable Kempston operation mode and the way to check this would be to type in the following program line with the Protocol 4

QL sales variable

THE QL has been greeted with mixed reactions by the retail trade. While stores such as WH Smith and Boots are pleased with sales, smaller outlets are not so happy.

A spokeswoman for WH Smith says: "The QL is selling out fast. We are having no problems with the machine but would like to see more software for it."

The same is true of Dixons. Dave Gilbert, a spokesman for the company, says: "We can't get enough of them. It is selling very well. We have had no problems with orders and we get all that we need."

Smaller shops are having a limited success with the QL. John Arundel of The Silica Shop in Kent says: "We have the QL and some people have bought them. They are slow to move though."

Michael Howard of the Buffer Micro Shop reports a similar story. "We are getting all the QLs that we need. They are not going in vast numbers but we are selling them."

Sinclair Research is confident that the slow start will turn into a rush when more people realise that the machine is in the shops.

A spokesman says: "Dealers are happy with the QL. Word is out that it is in the shops now and sales will increase accordingly."

Professional QL compiler

THE FIRST true compiler for the QL has been launched by Bristol-based software house Metacomco.

The compiler runs BCPL, Basic Combined Programming Language, which is widely used as the systems programming language on many different minis and micros.

BCPL is ideal for writing utilities, applications programs and even games. The package also supplies routines which will make the QL graphics and window facilities easier to use.

Metacomco is to sell BCPL for £59.95 and is also releasing a version of LISP for the same price.

attached to the Spectrum, its mode switch in the down position and with the Kempston card inserted: Print IN 31, press ENTER.

If anything other than 0 is printed, the unit should be returned to AGF for a free replacement. The address for returns is: AGF Hardware, FREEPOST, Bognor Regis, West Sussex, PO22 9BY.

Updated Utilities from the Best in the Business...

MACHINE CODE or BASIC we've now updated what were the best programming tools for you! Try them and see why our products are regarded by most programming as the best available-by far!

MASTER TOOL KIT £9.95
YOUR BASIC WILL NEVER BE THE SAME AGAIN!!

This program adds a whole new range of really powerful commands: Real time clock and alarm with off/on/set and print commands. BLOCK MOVE, COPY, DELETE and MERGE two lines. FIND and CHANGE character string, RENUMBER, 10 programmable keys, TRACE with execution display. VARIABLE display and dump. COMPRESS, REMKILL and PACK to minimise program bytes. CHANGE CASE upper to lower and back.

FULL SCREEN EDITOR/ASSEMBLER
16/48K £12.95

Voted the most powerful MACHINE CODE programming tool yet seen by Home Computing Weekly.

Editing facilities comparable to the most sophisticated word processor with MOVE, COPY and/or DELETE lines or blocks of code. LOCATE, CHANGE or DELETE strings/characters, full 280 set supported, syntax check, powerful expression evaluator etc. and 'SNAKE' a fully noted source code demonstration program.

Many new instructions with this latest version. Plus 80 facilities now included as standard.

MACHINE CODE TEST TOOL.
16/48K £9.95

The ultimate professional tutor and debug program. We wrote this to help us write our own MACHINE CODE programs.

**£3.00
Exchange
Deal**
MAIL ORDER ONLY

TEST and display MACHINE CODE instructions as they're written. Ideal for both the novice and the expert. Fully documented with a 32 page tutorial. HEX: DECIMAL conversion as standard. Character Generator of unbelievable quality. Supplied free with the Spectrum™ version.

This program can co-reside in your Spectrum with the Full Screen Editor/Assembler to provide a complete MACHINE CODE environment,

including 80 Column printout.

£3.00 EXCHANGE DEAL! AVAILABLE MAIL ORDER ONLY

If you want to update your software, we'll give you a £3 allowance on a standard program, and £5 on a Plus 80 version when you buy your new Microdrive Compatible programs from us, provided you return your old program cassette with your order. What's more, buy Full Screen Editor/Assembler and Machine Code Test Tool together and it'll cost you just £19.95.

Available from larger branches of WHSMITH or mail order direct - for instant purchase, contact The OCP Hotline with your details.

Grandmasters of Midnight

THE WINNER of the **Doomdark's Revenge** competition, in the October issue of *Sinclair User*, is Philip Middlewood of Great Barford, Bedfordshire.

The 25 second prize winners are: Chris Herbert, Frating, Essex; Jack Kelley, Penicuik, Scotland; John Northcliff, Adwick-upon-Dearne, Doncaster; Martin Dowie, Cupar, Fife; Matthew Stott, York; Stephen Trayler, Wimborne, Dorset; P Mills, Coventry; P W Camp, Cowley, Oxford; Richard Taylor, Lichfield, Staffordshire; Howard Davies-Carr, Stoke Bishop, Bristol; Kev Cromcombe, Sheffield; David Finch, Barmouth, Gwynedd; R Kerr, Blantyre, Glasgow; Sheridan Pynes, Bexleyheath, Kent; Louis Clement, Richmond, Surrey; Kevin Mullowney, Beeston, Leeds; P D Tidy, Newbury, Berkshire; T Aviss, Hadleigh, Suffolk; C P Sempers, North Ferriby, North Humberside; Stuart Johnson, Sunderland, Tyne and Wear; J Rogers, Oldbury, Warley; Mark Wallis, Haywards Heath, West Sussex; Janette Fowler, Grange-mouth, Central Region; Paul Matakita, Yeovil, Somerset; Christopher Ambrose, Stockport, Cheshire.

The 25 runners-up are: A G Simon, London SW9; Alan Rowlands,

Telford, Salop; B White, Marlow, Buckinghamshire; Glen D Brock, Cheney, Oxfordshire; J Ellis, Paignton, Devon; Andrew Edwards, Leicester; Alex Hughes, Solihull, West Midlands; Ian Morris, Bovey Tracey, South Devon; Ben Wharton, London, NW6; Michael Park, Scarborough, North Yorkshire; M H O'Connor, Crediton, Devon; Jean-Yves Rouffiac, London, NW1; S Stanway, Trentham, Staffordshire;

C D Sheldon, Swansea; Elane Davidson, Dumbartonshire, Scotland; Russell Keyte, Southampton; Ian Clark, Edinburgh; Dave Freeman, Purley, Surrey; S L Brasington, Rhyl, Clwyd; Chris Boorn, Gosport, Hampshire; G C Taylor, Crossford, Fife; Ian McVicar, Mount Blow, Clydebank; G Walton, Willenhall, West Midlands; George Turnbull, Leeds, West Yorkshire; Alan Gough, Southampton.

Piracy policemen

A FIGHTING fund has been established by the Guild of Software Houses which will be used against piracy.

Contributions to the fund will initially be made by the group's 34 members but Paul Duffy, General Secretary of GOSH, states that anybody can put money into the pool. "We would also like to get publishers and other people connected with the industry involved."

Duffy went on to say that

GOSH wants to bring a major case against a software pirate. "That involves a lot of money, perhaps as much as £100,000. Even if we lose that will give us good grounds to go to MPs and say that the law does not stop piracy.

"We are writing to local councils telling them that if school equipment is used for piracy then we will hold the school responsible and prosecute them."

The comrades' conundrum

A £25,000 prize is being offered to the first person who can crack **Eureka!**, a five part arcade/adventure game for the Spectrum.

The scenario for the adventure, featured in Software Scene this month, was penned by games wizard Ian Livingstone and the product is being marketed by Domark, a company run by Dominic Wheatley, grandson of the novelist Dennis Wheatley, and Mark Strachan.

Domark claims that the game was the result of 10,000 man hours by a Hungarian programming team behind the Iron Curtain. The team of 20 includes four graphic artists, two musicians, a professor of logic and an Oscar winning cartoonist.

The competition ends on 31 December 1985 and Domark believes that it could take 15 months to solve.

Clive's dive

REPORTS begin to filter through of strange happenings at **Sir Clive's** London residence earlier in the Summer. While the final details to the refurbishment were being carried out, the basement flooded. Workers carrying pot plants to the roof garden were stuck in the lift. To cap it all, Sir Clive's jacuzzi wouldn't work. How galling it must be to come home from a hard day dealing with QL complaints only to discover your hi-tech bath is bugged as well . . .

We cannot imagine Sir Clive relaxing in his jacuzzi without some form of mental stimulation. As a tamer alternative to dipping **Acorn** bigwig **Chris Curry** in the pool

as a substitute for motherhood? . . .

Talking of mothers, Ferrari-lover **Bruce Everiss**, former operations director of **Imagine**, has been holding forth to any journalists still prepared to listen to the 'true' story behind the downfall of **Imagine**. In the interests of simplicity, Everiss omits to mention such obscure events as the bugging of **Colin Stokes'** telephone, the dawn raid on his house, the accusations flying around that **Imagine** went so far as to hire private detectives to report on the plans of other software companies. The Gospel according to Bruce now has it that **Imagine's** directors were simply young, green, and

MARK FIDDIAN of recently launched **Streetwise Micros** tries to flog a **Spectrum +** to **Topo** the redundant robot. Next month, when the organisers finally persuade **Topo** to turn the black box upside down, we shall expect further news on what happens when all the keys fall on the floor.

— as reported in *Microscope* — he might enjoy reading the first issue of *Micro Arts*. The foreword of this extremely pretentious magazine was penned by one **Clive Sinclair**, and contains a lyrical exposition of the therapeutic qualities of hacking. "It is the Computer personality who dares face change without feeling the sense of loss that goes with the departure from the womb" rambles 'Clive'. We know he wants to abolish doctors and schoolteachers in favour of computers, but the **Spectrum**

foolish enough to actually believe all the harmless untruths — sorry Bruce, totally justifiable marketing hype — that St Bruce was telling about the company . . .

Next, according to Bruce, is the possibility of a book about how the games industry works. Readers are invited to send in their ideas for the title — 20,000 unused copies of **Schizoids** for the best entries. . .

Liverpool hype is not the only hype around. **Haresoft**, producer of the intensely boring **Hareraiser** competition/

WALLY WEEK of Automania and **Pyjamarama** embarrasses his **Mikro-Gen** pals in bad taste pic of the month. Wally is peeved that the universe does not think his games are better than **Jet Set Willy** or **Kokotoni Wilf**, and wants readers to vote on the matter. Wally is the one on the left.

game, has informed a stunned world that a clue to the puzzle was revealed by TV personality **Anneka Rice** in Harrods one Saturday. Who, if anybody, was there to hear the golden girl's words of wisdom is not stated on the press release, but if anyone did perhaps they could let us know what the clue was and we can pass it on to whomever, if anybody, has bought the game. . .

A further item from the prolific **Haresoft** PR people sheds light on the decision to release the game in two parts: "To make it fun and enable competitors of all ages to participate." Bet you thought it was just to make more money. . .

What with hackers infiltrating Phil's Prestel account, it seems the **Windsors** are getting plenty of free publicity from the micro-world. Now comes news of **Di's Baby**, a new game from **Bad Taste Software**. Gremlin will report further as soon as a convenient bedroom window is left open. . .

Great news for **Spectrum +** owners. **Cheetah**, flushed with success at abolishing everybody else's joystick with the toothless infra-red **RAT**, has announced that all its software and hardware is compatible with the new **Spectrum**. Not only has the company achieved full compatibility

incredibly quickly following the **Spectrum +** launch, it has even managed to do it without spending so much as a penny on the operation — excepting of course the cost of writing the press release. . .

Brazen **Backslappers'** award for January must surely go to **Hewson Consultants**. The company has presented a gold cassette — no, not **Alchemist** with the game wiped off — to its own programmer **Mike Male** for selling 100,000 cassettes of his games **Nightflite II** and **Heathrow ATC**. Mike has made so much money out of the games, we are told, that he has been able to buy his own aeroplane. . .

Finally, to prove we can play the game as well as anyone else, hot news from the Turkish desert via the back pages of *Computing* magazine. Apparently one of the paper's correspondents was on holiday in the remote east of the country and seeking an English newspaper to read over his curd cheese and olives. The only paper available in the whole town was *Sinclair User* — copy upon copy. If you know anything more about the great yearly migration of computer magazines along the caravan routes to the mystic Orient, please write to: Gremlin, Oasis 37, The Road to Samarkand, Babylon. . .

First, a question.

Who do you think are the world's most avid consumers of microcomputers?

The ingenious Japanese?
The fashionable French?
The acquisitive Americans?

Believe it or not, it's we British who own more micros per person than any other nation on earth.

Yet, despite its amazing impact, the microcomputer has only just begun to scratch at the surface of our lives. Without doubt, the best is yet to come.

Use and Abuse.

In several recent surveys, some astonishing facts about micro use and abuse were revealed.

It was discovered that the micro is hopelessly under-utilised. If you're already a micro owner, your own experience may well confirm this unhappy state of affairs.

Brainpower. A source of knowledge.

For thousands of years, the key to self improvement has been in the hands of the written word. Now, thanks to the Brainpower range, it's very much in the hands of the micro.

As the Brainpower range demonstrates, this does not require prior knowledge of micros, or how they work.

The Brainpower concept has been devised as *integrated* applications and educational software. And its aim

Each Brainpower title provides a unique three part package: an applications program; a teaching program and an illustrated manual and interactive tutorial - integrated applications and educational software

WHEN WILL HE STOP
USING ME LIKE A TOY AND
START USING ME LIKE
A COMPUTER ?

Now you and your micro bring out the best

is to stretch both your mind and your imagination.

It offers a unique way to realise your own full potential and that of your micro. In a way you could never hope to achieve from the printed word alone.

In this respect, the Brainpower range stands on its own.

A unique concept.

All the Brainpower titles share one thing in common, apart from their stimulating subject matter, that makes them unique.

You will find each title comprises three distinctive elements: A teaching program that helps you to get to grips

IKNOW HE'S GOT A
BRAIN IN THERE. IF ONLY
I COULD DISCOVER THE
BEST WAY OF USING
IT.

your micro can best in each other.

with the subject at your own pace. An applications program to put what you learn into action. And finally, with each package, you get an expertly written book and interactive tutorial.

STAR WATCHER

The secrets of the heavens are yours. Isolate all the constellations as well as main stars for easy identification. Even turn stars and constellations on and off at will. Screen by screen, you will see exactly how the 1,500 brightest stars move through time and space. And all from any point on the Earth's surface at any time of the year.

Star Watcher is without doubt the definitive home observatory.

DECISION MAKER

Should you buy a new house? Change jobs? Have children? Start your own business? Such decisions should not be taken lightly. Armed with Decision Maker, you can be quite sure of examining every avenue, and arriving at a rational, structured answer.

If you value the way you run your life, you need Decision Maker.

NUMBERS AT WORK

Tackle all the number problems you're likely to face in daily and business life. From straightforward multiplication and division of fractions, through decimals, percentages, ratios, mark-ups and margins to compound interest, depreciation, VAT and PAYE.

Numbers at Work gives you a distinct edge, since you will be able to both understand and manipulate numbers at will.

PROJECT PLANNER

Project Planner teaches you how to divide even the most complex project down into meaningful components. Learn how to determine the length and importance of every single task, and those elements critical to the fulfilment of your plan. Even anticipate problems you hadn't envisaged.

You have the measure of any situation because you have the fullest possible grasp of all the factors which affect it.

FORECASTER

Forecaster takes the guesswork out of forecasting, by accepting that tomorrow's events will be best predicted on the basis of today's facts. Armed with Forecaster, sales targets and growth trends, even sporting events and election results can be accurately and very quickly predicted.

Invaluable to you in both your private and business life.

ENTREPRENEUR

Entrepreneur teaches you all the steps required to plan and start your own business. It will forecast your first 18 months' cash flows, generate your Profit and Loss Account and Balance Sheet. Help you in discussions with your bank manager and partners. Explain the notions of assets, liabilities, overheads, working capital, cash flow and break even point.

Invaluable to anyone who is planning a business venture.

PERSONAL CALLERS WELCOME WE ALSO STOCK SOFTWARE!

Irate women bite back

I FELT I HAD TO comment on the news article entitled 'Computer machismo' in the November issue.

As a woman who has been working in the microcomputer industry for a number of years I too am extremely concerned about the lack of female interest in computers.

I do not, however, agree with the view of Ebury Software that publishing software under the *Good Housekeeping* title is going to do anything to help generate more interest. This is an extremely patronising attitude for Ebury to take, and one which will only help to further alienate women from computers and increase the sexist attitude of software publishers.

What Roger Barrett does not include in his — typically male — list of 'positive, traditional skills women have' is creativity. My own personal view is that just as soon as languages like **Logo** gain more recognition throughout the industry and begin to go into homes many women will find that most of their fears about computer programming are nonsense.

The important thing about **Logo** as compared to packages such as the *Good Housekeeping* type is that it gives people an outlet for creativity as well as programming or learning about computers. Creativity, which for many women has been lying dormant for a long time, will remain buried forever, if companies such as Ebury Software have their way.

Christine Roberts,
London NW1.

Accurate Adspeak?

IT WOULD APPEAR that the whole publishing industry dealing with magazines and books really needs to examine its methods more closely. Computing requires

the utmost accuracy in all aspects of programming, yet in all publications, the number of mistakes which occur is appalling.

In addition, although much of your income is derived from advertising, some of the advertising material verges on downright deceit. Keyboards are a prime example. Most adverts state 'five minutes and a screwdriver'. Yet we then read reviews where screwdrivers won't line up, casings have to be cut and other horrors. Some advertisers would surely have difficulty in explaining their blurb to the Advertising Authority, and not just on keyboards either.

Why can't we have magazines which don't have mistakes and advertisers who get a little closer to the truth about their products?

A J T Longhurst,
Desborough,
Northamptonshire

Peripheral round-up

I AM getting a ZX Spectrum this year for Christmas and after reading every advertisement for joysticks and interfaces in your magazine I would like to know which is the best to buy.

Chris Wilcox,
London NW6.

● *The 1985 Sinclair User Annual has an up-to-date round-up of the best joysticks and interfaces manufactured during the last year.*

Protective software

THERE WAS an article in the September edition of *Sinclair User* about how to protect your programs from software pirates. The article showed several ways of doing that for the Spectrum including making a line with the number 0.

For ZX-81 users who would like to do the same, type in a line (e.g. 10 REM COPYRIGHT) and press NEWLINE; Type in POKE 16510,0 and NEWLINE; Press NEWLINE again and you will see '0 REM COPYRIGHT.'

That line cannot be edited and cannot be erased by typing in 0 and then NEWLINE.

Andrew Fox,
Ipswich, Suffolk.

Sabre Wulf king deposed

I WOULD just like to say, in reply to Des Claypole's letter in the November edition of your excellent *Sinclair User*, that he has now abdicated. He claims himself to be the **Sabre Wulf** king but I finished on an earlier date than June 7 on the very day that I bought the game. I considered it so simple that it wasn't worth writing in about. So I now claim to be the mega-supreme Sabre Wulf emperor.

R Worden,
Preston,
Lancashire.

Clamp down on pirates

I READ with interest the letter from Mr Dickinson — November, *Sinclair User* — who mentioned how he had

to clamp down on the abuse of his school Spectrums for tape-copying.

There can be no doubt that a great deal of piracy goes on under the aegis of schools, and that some-called computer clubs are little more than mutual copying circles. That is not only a disaster for the software business; it is an educational catastrophe too, as witness the letter on the same page from Colin Baxter who can see nothing wrong with making a copy of a tape which he cannot afford to buy. That can only be because he has not been taught to.

What happens outside the school is not the school's concern, but it is the responsibility of the schools, as much as of parents, to teach computer-owning youngsters not to steal copyright work, and if they do not computers will do more harm than good to those who are given them.

Andrew Turek,
London NW11.

Beat Daley's world record

My friend and I have recently bought **Daley Thompson's Decathlon**. We played for 1 hour 45 minutes non-stop, and reached the final score of 1,181,160, and cleared 27 sheets containing five events in each sheet on day one.

Kirk Green,
aged 14,
Paul Bush,
aged 15,
Ilford, Essex.

Sick CUBs recalled

CALLING all CUB QL-compatible users.

A supplier's component fault is suspected on model numbers 1451/DQ/3 and 1451/MQ/3 with serial numbers between 85692 and 103317.

To enable us to rectify the situation, therefore, I should be grateful if readers with such models telephone David

Kaye on Bradford 726500 so that we can make arrangements for the collection of their monitors for the necessary up-grading to be carried out.

The cost of this operation will be borne by Microvitec PLC.

Tony Fall,
Marketing Manager,
Microvitec.

more letters on page 20

Getting the printer blues

I HAVE just spent a day in Exeter unsuccessfully trying to buy a printer for my Spectrum.

I was told that the ZX printer is no longer available: "We don't stock them any more, they gave us too much trouble."

I found that the Alphacom 32 had leapt up in price by £20 or so. "That happened when the ZX printer was withdrawn."

No supplier could show me a printout in black ink on white paper.

No supplier had a printer linked up to a computer so that I could see it working. As the blue printout as seen was not good enough, and the black ink was not to be seen, I came away without a printer.

I think that shops are taking a casual view of the customer, riding on the crest of a wave of sales. Maybe they feel that there is no need to bother with demonstrations. Considering the price of even the cheapest printer, it seems odd that they don't make a bit more effort, shoe shops take a lot more trouble to sell a much less expensive product.

Bill Robinson,
Dawlish,
Devon.

Printing at midnight

I AM writing to say how I feel about the Beyond Software **Lords of Midnight** competition. I for one can complete the game but have no printer, and cannot enter. It annoys me greatly that a printer is necessary to enter the competition because it means spending more than the £9.95 that the game costs.

Gareth Layzell,
Stanmore,
Middlesex.

● Many readers have com-

plaints of a similar nature. Beyond Software be warned!

Fanfare for the ZX-81

RICHARD Brooker — November — is right to ask for more ZX-81 cover in *Sinclair User*. I believe it is important that you do more for users of this excellent little computer — and always bear in mind that it is still selling.

Furthermore I would like to make a point about your software reviews. It could be that you underate some of the programs for ZX-81 thereby dissuading potential buyers. For example, I thoroughly enjoy playing **Racing League**, a strategic game concerning the Sport of Kings. Your review said the game was 'slow'. Even the highly successful **Football Manager** — Gilbert Factor only 7! — is slow on the ZX-81 but it remains a great game!

T G Bell, Winlaton,
Tyne and Wear.

● *Racing League was de-*

scribed as slow because the bulk of it was written in Basic, not machine code.

Speechless Spectrums

I RECENTLY made a speech synthesiser unit which operates quite well on my 48K Spectrum. Unfortunately, it suffers from a limited vocabulary. It operates on the Allophone system from the SP0256-AL2.

I would appreciate information on how I may obtain words together with their Allophone equivalents from other readers.

Declan Grady,
Cullion Road,
Letterkenny, Co. Donegal.

C64 slips past censors?

I FEEL that I must write and express my deep disappointment and annoyance at finding a Commodore advertisement in the October issue. It may have escaped your notice but your magazine is called *Sinclair User*!

If you keep this up you will have lost one loyal customer.

J S Shaw, Blackfield,
Southampton.

● *Rob Cameron, advertisement manager replies: In the long run it is product quality and service which counts and if Sinclair's rivals feel they can do better who are we to censor them from saying so?*

50 of the best?

YOUR TOP 50 Software Classics — November, *Sinclair User* — is a classic example of the way your magazine seems to be heading. One war game mentioned, no management or strategy games that I could see. I know you have reviewed such games as **Conquest** and **Fall of Rome** but can you do more?

Peter J Beard,
Market Rasen,
Lincolnshire.

I MUST congratulate you on your excellent magazine, it goes from strength to strength. November's issue must have been the largest yet and the top 50 games booklet was a great bonus. However, I was amazed that **Scuba Diver** by Durrell wasn't included. It has to be one of the most addictive and graphically superior games around.

John Meads,
Rainham,
Kent.

Programming for more cash

A FEW errors have crept into program listings of late, for which we do apologise. **Domewars**, in the November issue, should be amended as follows:

Line 340 should read: PRINT AT 19,3; INK 6;"*"; INK 5;"+"; AT 20,3; INK 7;"."; INK 3;"'"

We should also point that the program does not use User-defined Graphics in the conventional sense, but changes the character set instead. That appears to have confused some readers.

Home Accounts in the November issue is lacking a few lines of the last DATA statement. It should read:

9800 DATA
"a",10,"b",1000,
"c",2000,"d",3000,
"e",8900,"f",8950,
"g",8980,"h",8990,
"A",10,"B",1000,
"C",2000,"D",3000,
"E",8900,"F",8950,
"G",8980,"H",8990.

In Home Accounts, the bank statement section is there purely for reference and will not be used by the monthly forecast.

Finally, **The Right Stuff** in the October issue also suffered from gremlins. Make the following amendments:

1 GOTO 500
479 IF q hi THEN GO TO
9301

507 RUN 600
630 FOR f=0 TO 7
9234 LET q=hi

Now for the good news. From now on we shall be paying £20 for each program published, and £50 for star programs. Details of how to send programs can be found on the Contents page. Please make sure that your programs are accompanied by a letter describing the game, your name and address, and a cassette or cartridge containing the program.

We try our best to send back programs we cannot publish as quickly as possible, and will make special efforts with cartridges.

SPECTRUM 48K · COMMODORE 64 · BBC MODEL B · 32K ATARI

NAME.....

PAINTBOX

Superb Graphics — without expensive hardware!

PAINTBOX is a must for every owner of a 48K Spectrum.

It will give you the ability to produce stunning graphics on your micro — simply.

With PAINTBOX there's no need for expensive hardware — why pay up to £150 for hardware when you can produce incredible picture and graphics with one cassette-based software package?

If you haven't seen PAINTBOX demonstrated you're in for a pleasant surprise!

For instance, PAINTBOX will enable you to draw practically anything on your screen and save it either as SCREEN\$ or as a machine code memory file to use in your BASIC or MC programs.

You wield enormous power over the graphics capability of your SPECTRUM — including the definition, storage and use of up to 84 UDG's — 4 times more than normal! A brief description of facilities are as follows:

UDG DRAWING BOARD for defining up to 4 Banks of UDG's including ROTATE, MIRROR, INVERSE etc.

UDG EDITOR for storing up to 84 UDG's for use in screen planning or in your other programs.

PRECISION PLOTTER. A high-resolution drawing board which allows you to draw anything on the screen. Facilities like CIRCLE, FILL, ARC, PLOT, DRAW, ERASE, OVER, DRAW RADially, INK, BRIGHT etc are included and easy to use!

SCREEN PLANNER gives you the best of both worlds! The combined use of PRECISION PLOTTER and your Banks of UDG's for highly detailed and precise screen graphics.

The program is complete with DEMO on side two of the cassette and a 28 page instruction booklet.

PAINTBOX can be used with Joysticks and is Sinclair Microdrive compatible.

SCREEN MACHINE

Instant Machine Code for graphics and text

SCREEN MACHINE is a completely professional graphics utility to use with Paintbox (or any other graphics hardware or software).

It will allow you to manipulate your screen graphics and text in ways which will make your programs better and more memory efficient. For instance:

If you have produced a screen-full of superb graphics you can enlarge, reduce, recolour, flip screen, relocate your graphics to another part of the screen, superimpose one screen on another and perform all sorts of other wonders!

Then you can take your results and put them through a series of memory compression routines to allow you to save enormous

HERE'S SIX WAYS TO

amounts of memory. Such items like compressing with or without attributes, saving thirds of the screen and multiple combinations of both are possible.

Never has machine code storage of graphics been simpler because SCREEN MACHINE automatically creates re-callable multiple screen files with a location catalogue so that you can add them to your programs!

SCREEN MACHINE also allows the user to program UDG's or text directly into machine code, so if your programs use a lot of text instructions or menus SCREEN MACHINE is going to save fantastic amounts of memory!

SCREEN MACHINE is a major graphics toolkit for the 48K SPECTRUM. It is completely menu-driven, Sinclair Microdrive compatible, and comes with instruction book and an unbelievable DEMO on side 2 of the cassette.

ADVENTURE PLANNER

A must for the adventure game fan

If you're an Adventure Game nut, Print 'n' Plotter's new ADVENTURE PLANNER is exactly what you have been looking for!

It's a 50 page, BIG SIZE (16 3/4" x 11 3/4") pad with a complete 'mapping' system with over 150 locations on each sheet . . . created to help you solve Adventure Games.

It's the best way to beat the 'system' and is obviously for use with any make of computer.

ADVENTURE PLANNER will also assist you in planning Adventure Games for programming — a helpful pad to keep by your computer at all times.

TO IMPROVE PROGRAMS.

ADVENTURE PLANNER is published with instructions for use, examples, hints and tips on how to play and win the game faster.

ADVENTURE PLANNER is a high quality pad, board-backed and fly-leaf cover . . . economically priced too!

ZX SPECTRUM JOTTER

Pre-planning your screen made easy . . . and precise!

Print 'n' Plotter JOTTERS have become a household word for the Sinclair enthusiast.

Despite various imitations our original ZX SPECTRUM JOTTER is still the one people prefer!

Of course it could be because it is professionally produced . . . the quality is superb.

And the fact that it is BIG SIZE A3 (16½" x 11¾") is a distinct advantage when working in high-resolution.

It's also 100 pages thick. 50 pages of PLOT grids showing each numbered pixel co-ordinate and 50 pages of PRINT grids showing every character and graphic character position and INPUT lines.

Each page also contains 24 UDG planning grids (2400 per pad).

Consider also the fact that it is printed on Artist's Detail paper . . . thick enough to take any writing, drawing or colouring, yet thin enough to overlay onto a drawing and trace-off.

For pre-planning graphics, text, tabulation or anything to produce 'on screen', a Print 'n' Plotter JOTTER won't be beaten.

The complete package comes with a set of coloured pens, a Pixel ruler and a handy corrugated storage tray.

If you use PAINTBOX, SCREEN MACHINE or any other graphics utility . . . you'll do things better with the ORIGINAL Print 'n' Plotter JOTTER!

KEYBOARD OVERLAYS

The simple answer to "Which key?"

Print 'n' Plotter KEYBOARD OVERLAYS for the standard ZX Spectrum keyboard are the economic answer to "Which key does what?"

If you program, or buy commercially-produced software, sooner or later you'll be faced with a mind-boggling mass of keys that perform different functions.

Let's face it, the Spectrum keyboard is complicated enough so why not take the easy way to remember . . .

. . . lay over the keyboard a Print 'n' Plotter OVERLAY and write the function underneath . . . it's child's play!

Print 'n' Plotter KEYBOARD OVERLAYS come in packs of ten. Punched to fit your Spectrum. Priced to suit your pocket!

ZX PRINTER PAPER

High quality. Cheaper Price!

Print 'n' Plotter have gained a good reputation for the most reliable and high quality PRINTER PAPER for your ZX PRINTER.

Now it's even better because we've reduced the price!

So if you want ZX PRINTER PAPER that gives good, clear print . . . and you want it a little cheaper . . . send today for quick delivery!

Transparently tacky

THE replacement keyboard for the Spectrum from Kappa Keyboards is a curious mixture of new and old ideas. It uses a style of key that was popular among DIY enthusiasts a few years ago and yet it has 14 single key functions, a recent innovation in keyboard design.

The keycaps are of transparent plastic and you are supplied with a sheet of paper on which the legends are printed. That has to be

cut up and the legends placed under the caps.

The extra single key functions are Edit, Delete, Comma, Full Stop, Dollar, Times, Graphics Mode and Caps Lock which toggle on and off, four shifted Cursor keys and True and Inverse Video. The last six are particularly useful with **Tasword II**, using the cursor keys to move around the text and the video keys to move one word at a time — an idea

reproduced on the new Spectrum+. In addition there are extra Caps Shift and Symbol Shift keys, but, there is no E Mode key, a major omission.

It is supplied as a replacement for the top half of the Spectrum. You remove the five screws holding the Spectrum together, disconnect the keyboard leads, insert the new leads and screw the case back together. The new leads are, unusually, ribbon cable with half the insulation removed, and so they will not stand repeated insertion.

With all the extra keys and the limited space available the keyboard is very cramped. Despite that Kappa still manages to find space to bring the Address and Data lines to the top of the keyboard via two IC sockets placed either side of the keys. The company sells an additional adapter which converts them to take a joystick. The left hand socket simu-

lates 1, 2, 3, 4 and 5 and the right hand one 6, 7, 8, 9 and 0, as used on Interface 2.

For £48.00 the keyboard has much to offer in facilities but it falls down badly in key layout, feel and looks. If it used better keys and was housed in a bigger case then it would be one of the best keyboards on the market.

There may be, however, a solution to the problem. Kappa can also supply a small electrical package at £14.00 to which you can wire your own keys. That allows you to have functions which normally require a shift key to be replaced by a single key.

Further details of those products can be obtained from Kappa Keyboards, 14 Pauls Mead, Portland, Dorset DT5 1JZ.

Spectrum switch

THE BEST things arrive in small packages and the Spectrum Switch from TEC is one of the smallest pieces of hardware we have had to review. It is an on/off switch which fits into the power socket of the Spectrum. The lead from the power supply plugs into the back, and there is a small rocker switch on the front. The unit is held in place by double sided tape.

It is a good idea to have some form of switch on the power supply as repeatedly pulling the plug will eventually weaken the socket. The Spectrum Switch is pleasantly styled and, provided the Spectrum is still in the original case, a useful addition.

The only problem is the price. While the cost of the component parts is reflected in the price of £4.95, if you are able to use a screwdriver you could add your own inline switch for a fraction of the price. If you would rather take the easy way out the Switch is available from TEC, 24 Victoria Road, Bromsgrove, Worcs.

more hardware on page 27

New COPY causes corruption

A NEW full-sized Centronics printer interface for the Spectrum has been launched by Cambridge Microelectronics Ltd. Called the Print-SP it allows the user to redirect the LPRINT and LLIST commands to the printer or to copy the screen.

As with many of the popular printer interfaces the software needed to run it is supplied on tape. That sits in the now unused printer buffer which has the advantage that it is compatible with software which uses memory above RAMTOP. It also has the disadvantage that NEW or COPY will delete it.

The software can be configured to give up to 80 characters per line and to give an automatic Line Feed (LF) after a Carriage Return (CR). The COPY routine can be configured for the Epson and Seikosha 100/250 types of

printer and is called by a RAND USR call.

Also supplied on the tape is a text processor program called SPWRITE. This is a Basic program which effectively DIMs an array of up to 500 by 64 characters and then allows you to fill each element.

On the plus side the interface is inexpensive at £31.25 including cable and, due to the case design, is easily fitted to a full-sized keyboard. However, it does not have a through connector for other

add-ons and there are many programs, such as **Tasword II**, which use the printer buffer making it incompatible. If Camel was to include software which sat above RAMTOP and dispensed with SPWRITE, which is of limited use then the interface would be a good buy. As it stands there is little to set it apart from the others on the market.

The Print-SP is available from Cambridge Microelectronics Ltd, One Milton Road, Cambridge CB4 1UY.

MUSIC TYPEWRITER

**COMPLETE MUSIC SYSTEM
FOR THE ZX SPECTRUM**

MUSIC TYPEWRITER gives you all facilities needed for music making. Using a special keyboard overlay it turns Spectrum into simulated music keyboard and enables you to write, edit, play & store music. Music is shown as played in **STANDARD NOTATION** and can be copied to a printer (see example above). **MUSIC TYPEWRITER** is easy to use even without any music knowledge and is an ideal educational tool for learning music. It's fun to play with for music novices and yet offers a lot even to professional musicians (like full transposing).

It has up to 16 compositions; 6 octave range; treble & bass clefs; two staves on screen; most time signatures & note values including dotted notes & triplets; staccato, tenuto; many automated features like tails direction, bar length, use of accidentals; error trapping; on-screen instructions; eight page manual, overlay and much more.

Please send me a copy of **MUSIC TYPEWRITER** at **£ 9.95** each ☐ SU
(European orders please add £1 overseas £2)

Compatibility cure

AFTER a slight hiccup AGF has now relaunched its Protocol 4 programmable joystick interface for the Spectrum. The original version was not compatible with all Kempston compatible games but that has now been cured.

A novel method is used to program the interface. You are supplied with five small plastic cards, four of which are already set up. Those cards contain a series of holes which represent the Address and Data lines as used by the Spectrum keyboard. Small rubberised pads are then in-

serted in the holes, one per line per key, according to a chart supplied, until the four directions, and fire, have been programmed.

The card is then inserted in the interface so that the rubber pads press down in a membrane, similar to that used on the Spectrum keyboard. The four preprogrammed cards simulate the 5, 6, 7, 8 and 0 keys, the 1, 2, 3, 4 and 5 or 6, 7, 8, 9 and 0 Interface 2 keys. The remaining card simulates the Kempston standard.

That process may appear rather complicated but it only has to be done once. AGF supply ten reference cards on which you can note the positions of the rubber pads and can supply additional plastic cards so you can keep a stock of preprogrammable cards. The cards can be changed while a program is running, if you are careful not to joggle the interface, and the keyboard is not disabled.

On the pre-production version tested, the expansion port had not been carried

through to the back of the interface, but AGF plans to do that on later models. It did have a useful reset button on the top of the interface and the ability to use joysticks with the Auto-Rapid Fire feature.

There are, however, some reservations about the interface. A membrane has a limited life. Also the cards sometimes fail to locate properly so that only two of the four directions worked. That could be cured by being heavy-handed when inserting

them but should not be necessary. The greatest problem is the speed of response. When the keyboard is simulated there is a delay between moving the stick and something happening. When playing a game that could mean the difference between getting zapped or living to fight another day.

Overall, the interface has much to offer but fails to deliver. For more details contact AGF, 26 Van Gogh Place, Bognor Regis, West Sussex PO22 9BY.

Boxing clever

REGULAR readers of the computer press may remember a bright idea sent in by a reader some time ago for storing microdrive cartridges. He suggested that some types of photographic slide boxes were just the right size to hold a dozen cartridges.

Not the sort of people to let a good idea go to waste, Kappa Keyboards, whose address is given elsewhere in Hardware World, obtained some slide boxes, printed its logo and an index on the top, and the Kappa Keyboards Cartridge Box was born. For £0.99 you get just that — a slide box with a printed lid.

If, however, you do not want the printing and only want to spend a fraction of that amount then contact your nearest photographic stockist.

Plug for memory pegs

ONE of the more unusual add-ons for the Spectrum is the Games Board from Marvic Marketing. This is a well made plastic cover which neatly clips over the keyboard with holes over all the keys. Pegs can then be inserted in the holes which, when pressed, press down on the key underneath.

The idea behind it is that if you put pegs over the only keys you need to play a particular game then you cannot inadvertently press the incorrect key, or forget which keys you are supposed to be using. To help you in that you are also supplied with sticky labels to put on the pegs with such useful legends as Bomb,

Laser, Start, Pause, Hyper and Fire as well as a number of arrows to indicate direction.

If you are completely absent-minded then this is the add-on for you. If not then

save your money and buy a joystick.

The Games Board is priced at £9.95, from Marvic Marketing, Arndale Centre, Stretford, Manchester M32 9BB.

QL POWER

AT YOUR FINGERTIPS FROM COMPUTER ONE

PASCAL £39.95 Inc. VAT & p&p.

Computer One PASCAL is a powerful implementation of this classic programming language. Produced specifically for the QL, this package provides a professional and highly educational programming system. Complete with comprehensive 80 page manual, this is the ultimate language package that no QL enthusiast can do without.

INCLUDES: * Full Screen Editor * QL graphics and sound extensions
* Example programmes * Complete 87 page User Guide
* Full implementation close to ISO-standard * Typically 15x faster than BASIC

FORTH £29.95 Inc. VAT & p&p.

FORTH is easy to learn, highly efficient, and allows you to explore the full capabilities of your QL. Computer One FORTH is a full implementation of the latest FORTH-83 standard with graphics and sound extensions, and may be used to produce machine code applications for your QL. Ideal for writing real-time or games programs.

INCLUDES: * FORTH-83 system * FORTH Screen Editor * 48-page manual
* QL-graphics and sound extensions * Example FORTH programs

ASSEMBLER £29.95 Inc. VAT & p&p.

COMPUTER ONE Assembler is a comprehensive assembler program toolkit providing a professional multitasking assembler written in machine code for speed and compactness. An ideal package for the machine code programmer, allowing you easy access to the QDOS operating system, and integration to your Superbasic and Pascal programs.

INCLUDES: * 68008 Assembler * Full Syntax Checking * Full screen editor
* Comprehensive User Manual * Integrates to Pascal and Superbasic

TYPING TUTOR

£19.95 Inc. VAT & p&p.

Let your Sinclair QL teach you to type! Computer One's Typing Tutor is a fast, easy and enjoyable way of learning true touch-typing on your QL.

INCLUDES: * Self-paced tutorials
* Speed and accuracy diagnosis
* Interactive colour graphics
* User Guide

Sinclair Surgery

Readers' feedback on crash prevention

THE OCTOBER issue of *Sinclair Surgery* provoked a number of readers to write in with useful hints. Most concerned ways of stopping the computer crashing if an add-on was joggled. Charles Rowbottom of Arnside, Cumbria suggested cleaning the edge connector with Switch Cleaning Fluid, while W R Corbett of Wigan had a useful POKE for Spectrum owners. He believes crashing is caused by the NMI line being disturbed which can be cured by POKE 23728,1. That is a new one to us but if it works then the best of luck to you.

Charles also pointed out that a Stereo tape deck can be used provided that both channels are used for recording and playback. If you do this you must make sure that you do not leave the EAR lead in while saving otherwise the feedback could do nasty, expensive things to your deck.

If you have any comments regarding our replies or tips of your own then let us know. You could save someone a few sleepless nights.

Sticky problems

I HAVE a complaint. Why do a lot of the Spectrum keyboards come away from the computer. That has happened to the computers of my friends and is beginning to happen to mine. What should I do about this?

**David Lyall,
Moary, Scotland.**

● The part that is coming unstuck is simply the metal cover plate on which the legends are printed, which fits over the rubber key mat. That was a com-

mon problem with early Spectrums until, after a number of complaints, Sinclair changed the glue for one that did not melt due to the heat. The solution is to simply glue it back into place with a suitable glue.

Racing wheels

CAN you answer a question concerning **Chequered Flag** from Psion? I have heard that a steering wheel was available with early copies to promote sales.

**Carl Ritchie,
North Harrow,
Middlesex.**

● The only steering wheel we know of was produced by Spirit Software, 1 Pembroke Mews, London W8, in conjunction with its Formula One racing game. We have never seen one of those wheels but would be happy to hear from readers, or Spirit Software, if it is still available.

Sickly sticks

I RECENTLY purchased a Ram Turbo Interface and a Quickshot II joystick. A problem has occurred. Frequently the joystick will not respond to upward movement; I usually have to adjust the joystick cable and sometimes it will work. I am unable to return both items as I purchased them in Boots in Liverpool.

**Rory Canavan,
Bray, County Wicklow,
Ireland.**

● If something you have bought does not work then the only answer is to send it back.

It should be possible to exchange it through your local branch of Boots.

Continuous firing

OWNING a 48K Spectrum, I now wish to purchase the Quickshot II joystick with the auto-fire feature. I wonder if you could advise me on which programmable interface to buy as some of them crash if you use this joystick. I cannot afford more than £30.00.

**Mark Wright,
Rugby,
Warwickshire.**

● This month in *Hardware World* we review the AGF Protocol 4 joystick interface. As far as we know that is the only interface which allows you to use the features of a standard Auto-Fire joystick and is priced at £29.95.

Solder onwards

STEPHEN Neal, November *Sinclair Surgery*, had a problem with his keyboard. The information you gave to him was correct, but it was not practical. I would bet that the problem lies in the cheap ribbon cable in the Spectrum. I can't really see the matrix giving up the ghost, not unless the user is hamfisted.

If you're handy with a soldering iron read on.

Carefully open the Spectrum to reveal the ribbon cables. Pull them out of the sockets. Unscrew the circuit board from the base.

With a suitable desoldering tool take out one of the two ribbon cable sockets. Solder one end of a new piece of flexible ribbon cable into the circuit board at the same place where the socket came

from. Then solder the socket to the other end of the ribbon cable.

With a pair of scissors, cut back the original cable so there is a kink-free length of cable to slide into the socket.

Do the same thing to the other cable if needed if not, make sure that there are no shorts when the computer is put together again.

Wasn't that nice and simple?

**Brian St Rose,
Ilford,
Essex.**

● This is correct if you know what you are doing but we would not recommend that a novice attempt to solder anything to the Spectrum circuit board.

Addressing bytes

WITH reference to your November issue I was a little surprised to read the advice you gave to D Williams and to Carl Williams concerning their problems as I would have thought that the cause of D Williams' problem, in particular, was pretty obvious. He or she was trying to dimension a numeric array, A(4000) on a ZX-81 with a 16K Rampack. Numeric variables — as nearly every schoolboy knows — require five bytes for each address in the array. Thus 4000=20K which will not go into any 16K RAM.

I regret that the advice which you gave Carl Williams was also slightly adrift. A file can be moved directly from one microdrive to another using the MOVE command.

**John Hale,
Newport Pagnell,
Buckinghamshire.**

Spectrum Speech Synthesizer!

The dk'tronics synthesizer, like all their other peripherals is both Spectrum & Spectrum plus compatible, it uses the popular SLO/256 speech chip and has an almost infinite vocabulary. It is supplied with a text to speech converter for ease of speech output creation. Everything you wish to be spoken is entered in normal English, without special control codes or characters, it is therefore extremely easy to use. The voicing of the words is completely user transparent and the computer can carry on its normal running of a program while the speech chip is talking.

Although there are only 26 letters in the alphabet, letters have a totally different sound when used in different words. For example, The "a" in Hay is much longer and softer than in Hat. When you speak you automatically make adjustments because you know just how a word should sound. Not quite so easy with a computer. After looking at other speech synthesizers we decided that it was essential that the dk'tronics Spectrum Speech would offer a simple system that would enable the user to produce realistic speech that was instantly recognisable.

The solution to the problem was extremely complicated, it required hours of programming to enable the computer to look at the individual letters that make up each word and compare their relative position to each other before deciding on the appropriate sound.

I am delighted that we have now perfected what I consider to be the best Spectrum Speech Synthesizer on the market, one which has achieved my aim, within the limitations of the allophones, of producing realistic speech.

At only £24.95 the dk'tronics speech synthesizer represents remarkable value for money. Naturally it is compatible with their other peripherals which can be used via the rear through connector.

Available from department stores and good computer shops everywhere or direct from

dk'tronics, Saffron Walden, Essex CB11 3AQ. 1SU
Tel. (0799) 26350 add £1.25 post and packing.

on-off re-set switch for spectrum

- No more crashing from worn power supply socket
- Does not affect expansion port and use of interfaces
- Just pushes into position does not affect spectrum or power supply lead.
- No need to remove once in position.
- Ergonomically designed — no more fumbling with power supply leads.
- Positive rocker action prevents accidental operation.
- Ideal for re-setting rom cartridge games — saves time when changing microdrive cartridges.

THE PUNTERS' PAL COLLECTION

STARTER'S ORDERS: The original and best horse race predictor. (67% winners on top tips with very good SP's).

Whilst the vast majority of punters had a bad flat season. Users of **STARTER'S ORDERS** enjoyed over £150 profit to a £1 level stake on each day's 'nap'. (Compare this to newspaper tipsters). Already after one month of the NH proper the program shows over £40 profit on 'naps' to a £1 level stake.

All the computer need know is the name and 6-figure form of each horse in a race. (Found in any daily newspaper).

Just one program to predict on both NH and flat.

No experience of horse racing is necessary to use the program.

No tedious updating of databases.

The only horse race predictor with a brand new dual and straight forecast and tri-cast facility. In three months correct tri-casts have paid 360-1, 211-1, 105-1, 102-1 plus many others below 100-1.

ONCE YOU HAVE THIS PROGRAM, THE ONLY THING IN DOUBT IS THE STARTING PRICES OF YOUR WINNERS!

HARE'S RUNNING: a successful and easy to use as **STARTER'S ORDERS** but for use on greyhound races.

If in doubt of the authenticity of the above, telephone on Boxing Day and every Saturday (till the end of January) between 9am and 1pm for the day's best bet plus the TV Nap.

Choosing a printer is a lot easier than choosing a computer.

THERE are dozens of quality printers from which to choose. With quality price tags of around £250.

The Brother M-1009, however, breaks all the rules.

Stays defiantly below the £200 barrier.

Though it has far more than its fair share of features, it maintains the extraordinarily low price of £199.95.

Travels at a steady fifty.

In the speed stakes, the M-1009 is certainly no slouch, being fully capable of up to 50 characters per second.

Providing bi-directional and logic seeking printing for normal characters and uni-directional printing for super and sub script and graphics.

Prints on any paper.

Being an impact printer, the M-1009 will print on virtually any paper, including letter headings, invoices and standard office stationery.

It will even print two copies together with your original.

A superb character recommendation.

In its price range, the M-1009 has a great deal more character than many printers.

96 no less, plus international type and graphic characters.

Reliability comes as standard.

Built to the same exacting standards as Brother's elite office

printers, the Brother M-1009 already has faultless credentials for reliability.

Its 9 pin dot matrix head, for example, has an astonishing 20 million character service life.

One printer that doesn't block out the light.

Many home computers tend to be a little on the large side.

In contrast, the compact M-1009, at only 7 cm high, keeps a discreet profile.

Well designed, reliable – and conscientious.

The Brother M-1009.

The future at your fingertips.

Here comes the chopper!

THE VIOLENT scenario of TLL has been replaced by an altogether more humanitarian mission in the sequel, **Cyclone**. Rather than provide you with a swing-wing Tornado, Vortex has obtained a nippy little helicopter, and your task is not to bomb the bases but collect vital medical supplies in the face of a colossal hurricane.

The playing area is large, an expanse of ocean dotted with islands which are being evacuated. A map option shows the overall picture, and charts the centre of the cyclone, which can move

around with frightening speed.

While the graphics are based firmly on the very successful TLL, with 3D-style landscapes and small houses, they are not as pleasing to the eye. The game has several new factors which, however, more than make up for the deficiency.

There is more animation; villagers on the islands wave at you, and the helicopter has a hook and line with which to winch up the crates of supplies. The rugged terrain of the islands may cause you to crash, but far more dangerous

are the other aircraft on the flight lanes between the islands, and the cyclone itself. While producing no apparent effect on the landscape, if you stray too close to the epicentre it will buffet you this way and that. You will be lucky to escape with your life, let alone with sufficient fuel to make it to a landing pad.

An extra bonus is the option to view the landscape from both North and South. The crates of supplies will only be visible from one direction, so you must explore the coastline carefully to find the boxes. The minute danger threatens it is all too easy to forget which way you are heading and fly straight into the eye of the storm.

While offering less opportunity for flashy aerobatics than its predecessor, **Cyclone** presents more problems and is more satisfying to play. The graphics are still effective, if less complex, and the concept of battling against the weather as well as your own cackhandedness is novel and welcome.

On a level with Ted

CHIPS, chips, everywhere and not a bite to eat. After all, who wants to eat the silicon variety?

Hewson Consultants obviously believe someone might like a byte and have launched **Technician Ted**. It is yet another platform game bearing startling similarities to **Jet Set Willy**.

You play the part of Ted in a silicon chip factory. It is a massive place and to get his meal of chips, Ted has to complete various tasks allowing him to pick up a glass, knife and fork and so on.

The graphics are highly coloured and scroll smoothly — transition from one screen to another is well oiled! Ted almost waltzes round the factory to the *Blue Danube*, a rousing number even when played on the Spectrum.

Technician Ted is guaranteed to keep avid arcade adventurers happy for a few days. However, if you prefer something with more zap, don't go anywhere near the silicon factory.

Eysenck, the shrink

PROFESSOR Hans Eysenck is one of the gurus of modern psychology, renowned for outspoken and often controversial views on the nature of human thought.

His recent book of personality tests, published by Penguin, became a minor bestseller, and the tests have now been released in the form of a computer program.

It must be emphasised that the tests are not supposed to have any clinical value, but are simply an entertaining questionnaire of the type that appears in glossy magazines, but glorified by the authority of the good professor.

The questions include all the things that you might expect, such as 'Have you ever wished you were dead?' or 'Do you feel you are a failure?'. In amongst these depressing interrogations are more intriguing queries, such as 'Do you eat your meals faster than everybody else?' or 'Would you like to watch a pornographic movie?'

Each test comprises about 200 questions. There is a facility to SAVE the data from each completed test so as to produce a grand display of all your faults and virtues in one soul-destroying blitz.

Taken as entertainment,

which is Mirrorsoft's purpose in releasing the program, **Know Your Own Personality** is good enough fun. One should not, however, believe everything the program says. Eysenck may be a leading authority, but even he cannot be expected to get it right with a silicon cushion between him and his patient.

Time for bed, said Zebedee

IN **The Magic Roundabout**, from CRL, Dougal and the gang are still playing happily in the Magic Garden where Dougal's aim is to build a house of sugar before bedtime. He has to collect lumps of sugar dotted around

the garden and dump them at the Magic Mushroom — resembling a deformed flower — where a train will appear to transport them to his house.

Sprite characters make up the graphics and although

they are a faithful copy of the original characters the movements are jerky and slow.

Not a game to start the adrenalin flowing — in fact it will continue to course sluggishly through your veins — it is great nevertheless to see that Dougal and friends are still around, even if they have been incarcerated in RAM for posterity.

The tales of Viking Eric

BASED on the book by Terry Jones, **Erik the Viking**, although published by Mosaic, has been programmed by Level 9. The adventure does not simply rehash the original but uses extracts from it to provide background and clues for a new saga.

Erik has settled down to become a prosperous farmer. While his sons go a-viking in the summers he prefers to sit by his hall fire and hear their tales. His contentment is short-lived and one day, as he

snoozes under a tree out on his pastures, his farm is raided by strange creatures from the outlands. He wakes to find his family and wealth have been taken.

The game begins at this point and Erik's task is to get his ship and crew together and then head down the fjord to the open sea. Appalling danger and powerful magic await him.

The program is attractively presented and the location graphics are well made, giving

a fair flavour of the period. They take a little time to draw but can be removed by entering 'words'. The scenario is imaginative and full of event. There are enchanters, goddesses, sea monsters and vicious enemies.

The puzzles appear to be quite complex, as we might expect from Level 9, and Erik's journey is full of

choice and decision. Even setting off requires a lot of forward planning.

The interpreter does not seem to have suffered too badly from the space given over to graphics though there were times when it could have been more helpful. In general, though, Erik the Viking is entertaining, complex and very good to look at. Even with a few minor criticisms Level 9 games are well above the normal standard of most adventures and this one is no exception, a blend of heroic adventure and detective story.

Richard Price

The flight of the BMX biker

EDDIE KIDD may have found it a doddle jumping 14 buses but in **Jump Challenge** it is not so easy.

In the official Eddie Kidd version from Martech Games, you are given the chance to beat Eddie's world record jump — secure in the knowledge that every time you fail your bones remain intact.

Peddalling furiously on your BMX, you warm up with a gentle jump over a mere 18 oil drums. It is quite easy — complacency sets in.

On graduating to motor bikes there is a relatively small jump over eight cars for starters! If, as the instructions state, you land with your back wheel on the ramp you should be all right.

The game calls for a large combination of skill, luck and the ability to judge speeds and distances. The speedometer and rev counter are a help but the main idea of the game is to teach the player to 'get the feel' of the bike.

The position of the rider is critical during the flight as he controls the angle of the bike. Making him lean backwards or forwards alters the bike's trajectory so that a safe landing can be negotiated. You will need to put in a lot of

practice to get it right.

The game is well written and includes all the elements of skill and coordination that make an exciting program. There is one irritating aspect. If you repeatedly fail to clear the eight car stage, the game will end and start again with

the BMX warm-up. When you are itching to get Eddie into the air, that stage seems a waste of time.

At one with the elements

ZENJI is a strange game but one which has become a cult in the United States. It is an Activision import which has been hurriedly translated to the Spectrum.

In order to become a master you must rely on your intuition to feel the forces flowing through the game's maze. Your playing piece is a face which revolves as you move the joystick or the keypad defined on the keyboard.

It starts at a central element

and you must move it round the corridors and connect it to other elements which lie at the nodes of the corridors. If you hit a connection then a power wave is started between the original and new element and a link established. Part of the maze lights up with the radiance that those sources give off.

The higher levels of the game involves mazes which fill the whole screen and creatures which will only be too

happy to feed on the energy that propels your character. If you bump into one then you will lose a life.

You will find that you will get better at the game and reach the higher levels but in **Zenji** experience is gained through insight and not mental reasoning. There is a way to beat the game at all its levels using logic but that spoils the excitement and we do not intend to reveal the answer.

Ultimately, Zenji is a test for two players. When you have enough mastery over the mazes then you should find a friend to pit your wits against.

John Gilbert

Bargains are bootyful

IN A BID to capitalise on the computer gaming scene, British Telecom has recently entered the market with their Silver range of games — priced at £2.50.

They are a mixed bag. BT's claim that the games are worthy of a five pound price tag seems to be applicable to only two of the games reviewed here. The remaining two would be expensive at any price over £2.50.

In **Booty**, you play the part of Jim the Cabin Boy who finds himself aboard the infamous pirate ship — the Black Galleon. One night while most of the pirates are sitting down to a steady drinking spree Jim creeps round the levels of the ship to steal their loot.

However, life is not always a game and Jim finds himself in the suds when he realises

that not all the pirates are drunk — some have been left on guard. To get into their cabins, he has to steal the keys from under their noses.

The graphics are excellent with half the game portrayed in the increasingly popular style reminiscent of **Sabre Wulf** and **Pyjamarama**.

Viking Raiders is a different kettle of fish. It is a strategy game set amongst warfaring vikings back in the days of King Canute.

There are four armies, each headed by a Viking chief. The aim is to defeat the other three armies and become victor and ruler of the area. Dirty tricks abound and your catapults can be used to devastating effect.

The graphics are sparse and basic. Each army takes a different colour which is hard on the eyes. Bright blues,

pinks and greens may look nice in the programmer's imagination but they look terrible to the player who has to squint to see what is going on. However, there is enough appeal in the game to detract from these basic graphics.

The remaining two games are **The Wild Bunch** and **Exodus**. The Wild Bunch is an adventure set in the wild west. Framed for a murder you didn't commit, you are out to nail the Wild Bunch. The game resembles a superior multiple choice with a selection of options given to you at every move.

Adventures written in that style are rarely as exciting as those written in the more conventional mode — they rapidly become tedious. Billed as a graphical adventure, The Wild Bunch has a few scenes dotted around the adventure which are well depicted. For the most part though it appears to be mostly text.

Exodus is your average arcade game packed with characters cloned from other games. Mutant llamas abound, hover mowers, galleons and TV sets lurk and assorted aliens merely wait to

get you. The game lacks excitement, the graphics flicker and the sound is fairly average.

Bikers out of control

ONCE they have fathomed how to choose the game control options budding BMX star-warriors should have a pretty good time with **Starbike**, a fast arcade production from The Edge.

You must steer your starbike across the planet's surface to rescue friendly droids and return them to the safety of your lander module via a teleport located in your sector.

Large numbers of hostile alien objects swarm over the screen and will eventually wear out your shields and send you to wherever it is deceased BMX star-warriors are supposed to spend eternity.

There are a number of control options and you can choose from several joysticks, the Fuller Master Unit, Interface 2 and Currah micro-speech. Working out how to select those requires a couple of A Levels.

It may take you some time to get used to the thrust con-

trols but, all told, the game is exciting and quite addictive.

Under starter's orders

AS A RESULT of the tremendous success of **Track & Field** in the arcades in this, the Olympic year, a number of companies have jumped on the bandwagon to produce clones for all micros.

The latest to enter the great race is Melbourne House with **Sports Hero**.

Crammed into the Spectrum's memory are four events — 100 metre sprint, long jump, 110 metre hurdles and the pole vault with a choice of three levels.

Under starters orders — BANG — and the runners were off, haring through the streets past graffiti covered billboards proclaiming 'Brix-

ton Rules'. No time to recover — on to the next event.

If you qualify in all four events you will go onto the next level where you will find yourself running for the university team.

The game is played in the same way as **Track & Field** where you have two run buttons and a jump button — necessary for hurdles, pole vault and the long jump. In order to run you will have to press the run buttons rapidly and an indicator will chart your speed.

A few small grouses — there isn't any sound except for a bleep from the starter's pistol. The game would be

greatly enhanced if you could hear the sound of feet pounding up the track.

Sports Hero is a one player game so you do lose the competitive aspect when playing with someone else and there are only four events albeit over three difficulty levels. Programmers are stretching the Spectrum to its limits — more events would have added a welcome variation.

Action through the ages

EUREKA!, Ian Livingstone's package, from Domark, contains something for everyone. Each of the five sections is prefaced with an arcade game which builds up the character's strength, or vigor, but tires the playing fingers.

In the prehistoric maze you are represented by a little figure, the size of a character square and difficult to distinguish from its background. You must guide it around the

maze, picking up roast chicken legs while avoiding flashing squares which rush at you and jumping on those which try to run away.

All those antics have a strange sort of logic to them. If you want to keep your sanity, however, it is best to pick up the nearest leg and make a dash for the exit. If you are not quick enough on the fire button, for this game surely requires a joystick, more chicken legs are scat-

tered around the maze.

Once through the finger punishment phase one of the adventures may be loaded. Those take you into a series of time slips through which you have to travel to find the pieces of a talisman first discovered on the moon by Apollo XVII but later shattered and lost in time.

First stop is the prehistoric age in which you can become breakfast for a dinosaur, discover hidden pitfalls, and become lost in one of the many forests which dominate the land.

If, after that, you are inclined to travel further you can load the next program and slip back to Ancient Rome where the slaves are revolting and the lions ravenous. Livingstone's long asso-

ciation with role-playing games ensures that full mythology value is injected into the scenario.

The mythological strain continues with a trip to Celtic Britain where you have to rescue the wizard Merlin and meet the crew of Camelot.

Once you have got those pieces of the talisman you can travel to the two final segments of the package which take place in the near past.

Despite the combination of arcade and adventure games the package is disappointing as it offers nothing new.

The package is good value however, especially considering the £25,000 prize for the lucky winner.

John Gilbert

EUREKA!

Memory: 48K

Price: £14.95

Joystick: Kempston, Sinclair

Gilbert Factor: 8

Heroics for he-men

THE USUAL lantern-jawed, muscle-bound hero adorns the cover of **Tower of Despair** from Games Workshop. A swift reading of the background history reveals a plot and setting not too far removed from *Lord of the Rings* — the hellish and very nasty sorcerer has resurfaced and orcs are abroad.

The Wizards' Council is extremely worried and has summoned you, the warrior-mage of Castle Argent and part-time weight lifter, to remove this Malnor chap and his demonic legions.

To do that you must find the Golden Gauntlet, currently in the possession of another elderly ex-hero. Journey through the wilderness, survive many perils, find the Tower, rub out Malnor. So much for the plot.

The adventure contains two complete sections. The program is written on the Quill and is text-only, though the character set has been changed to a pleasant medieval script with the occasional illuminated capital.

Naturally enough there are assorted monsters to overcome and care will need to be taken with the magical artifacts you encounter.

D & D devotees will probably feel at home in the land of Aelandor but more reluctant heroes may find they have been there too many

times already.

Richard Price

TOWER OF DESPAIR

Memory: 48K

Price: £7.95

Gilbert Factor: 5

Conquer Kent, crush Kabul

ALTHOUGH there have been many attempts to produce wargames on the Spectrum of comparable quality to the boardgames of the mid-seventies, few have managed to match their ancestors.

Lothlorien has attempted to rectify that with **Confrontation**, a system which allows players to define their own maps and forces for play.

The system suffers from being a two-player game, relegating the computer to the role of the umpire.

Battles are modern in style, with armoured and foot infantry, aircraft and artillery. The mechanics are of the move-fire type, with mobile units moving first and each player moving in turn.

The graphics are attractive and easy to follow. There are no confusing figures to interpret.

The Confrontation package includes a simple scenario to start you off. Lothlorien has also released a cassette of scenarios based on 'real' events, which cannot be used without the original program.

The scenarios are bold in conception; Egypt vs Israel across the Sinai desert is an exercise in chess-like precision of communication lines.

An Angolan scenario in which Unita defends coastal strongpoints against Cuban-trained forces introduces the possibility of South African reinforcements.

Operation Sea Lion enters the world of alternative history with the German invasion of Kent, while the fourth scenario has a Soviet column attempting to force a passage through the mountain passes of Afghanistan.

All of the scenarios, as well as the main program, are

well-constructed and represent challenging problems for keen wargamers. They will welcome the series with enthusiasm. But those who cannot claim to be avid armchair generals are less likely to find a sometimes frustrating business enthralling enough to justify the investment.

An audience with Machiavelli's Prince

DUPLICITY, cunning and self-interest are the keynotes of the 1984 Cambridge Award winner, **The Prince**, written by John Sherry and published by CCS. The title is consciously derived from Machiavelli's handbook of politics and is designed for four players.

Set in a gloomy renaissance fortress the game is a combination of strategy and adventure formats. The aim is to become Loremaster and chief counsellor to the Prince, ruler of this land, and each character must get to the top by any means possible —

whether it be theft, kidnap or mayhem.

After engaging the services of henchmen — who can 'hit' other castle servants and characters — and spies who can report on the actions of other people, each player moves around the fortress giving instructions to his staff and trying to secure the tokens which will ensure advancement. Goods can be bought and sold from the castle trader and a banker will arrange transfers of cash. Each player has a passcode which will allow him to take his turn — other players are

not supposed to observe this but are sure to try.

Life is not simple since any of the spies and henchmen recruited may well be working for other player-characters and information may be bought and sold.

The computer keeps track of your money and possessions and informs you of your current position at the beginning of each turn. Input is in standard verb/noun combinations and there is a hidden vocabulary besides the predefined commands for controlling your gang.

The Prince will involve you in much bargaining and chicanery with the three other human players. Alliances may be formed and broken, lying and deceit will be the most normal interactions. An audience with the

Prince himself is possible but he is temperamental and will brook no impertinence.

Ten inputs are allowed for each turn so you must plan your strategy carefully. Pictures of the people you are talking to are shown on-screen and the character set is a mock-gothic script.

The game is well-constructed and, since you only ever have a partial view of the goings on, is full of the unexpected. *Diplomacy* addicts will feel quite at home here as the web of treachery spreads through the palace and it is easy to become utterly absorbed in your character.

Richard Price

THE PRINCE

Code of the warrior

BEFORE your very eyes the bestial forces of the Darklords have destroyed your monastery and friends. Revenge is in your heart but you must first reach the capital and warn the king of the impending onslaught. War and danger will bedevil your every step.

Flight from the Dark is

an overlay is provided for the purpose — this could have been made more solidly.

The graphics are animated and you are shown walking or riding through the locations. If you encounter an enemy there is a very clever combat sequence which allows you to thrust, swipe, chop and parry with whatever weapons you

in class. As you prepare to return you see a vast cloud of black leathery creatures swoop down and engulf the monastery.

the computer version of the Arrow single role-play book and the program is packaged with it for double enjoyment and references. The program contains new situations but follows the original plot and the screen display will show if you are dealing with a section of the book by indicating the relevant paragraph.

Options are scrolled up below the graphic display and the choice is made by a key-press. Other actions are also controlled by single keys and

currently hold. This is in real time and can be a nail biting experience as your survival will depend on the fighting skill you have built up in the course of your travels.

Addicts of the book version will find the program every bit as demanding and exciting. The general quality of the graphics enhances that pleasure.

Willy in armour

IF YOU OWN a 16K Spectrum and have felt left out since Manic Miner and Jet Set Willy were produced for the 48K machine then **Sir Lancelot**, from Melbourne House, may take away some of the heartache.

Although the author does not equate the game with the best-selling Willy series there are some obvious parallels. As the fabled knight in shining armour you must investigate 24 rooms through which have been strewn treasures, including keys, crowns and gold, and seven different types of monster. They move mechanically up and down or across the screen and your task is to develop a strategy to

defeat them and retrieve the treasure.

The solutions to the treasure quests on each screen are made harder when the objects seem to be out of reach. However, each screen contains an answer and it just takes practice to get to the next one.

Sir Lancelot is a 48K game crammed into a 16K machine and as such the author should be congratulated.

With TALLY the QL really means business

Business Accounts Software integrating fully with Quilt, Archive, Easel and Abacus

Tally 1 – £115.00

Sales Invoicing
Sales Ledger
Stock Control

Tally 2 – £59.00

Purchase Ledger
Nominal Ledger

There can be little doubt that the QL represents an ideal entry-level computer for businesses which have so far been deterred by the cost or complications involved. Not only is the QL a powerful machine in itself, it also comes supplied with highly capable software packages covering four of the five major business applications areas.

Now Quest supply the fifth – Accounts. Tally offers all of the elements required to provide the

type of financial control used by large companies at a cost which even the smallest can afford. It is designed to integrate completely with the four business programs supplied with the QL – so you can use Tally in combination with them to control stock, invoicing and mailshots and can even display in graphic form sales performance by product or period and from that make projections and forecasts.

All in all, Tally is a unique combination of accounts control and business management. By using Tally in conjunction with the QL's bundled software, you will be able to administer, monitor and plan your company's performance at a very reasonable cost. However much your business expands, you will find that Tally, with its built-in flexibility, has at all times a capacity and capability to match your growth.

Tally is part of the QL executive series of hardware and software products which makes the QL the ideal choice for business and home use.

Celtic quest of Cuchulainn

OTHER programmers will find it difficult competing with **Tir Na Nog** from Gargoyle. Until you have loaded up you may think that the booklet's boast of a 'computer movie' is pushing it a bit. Not so — this animated graphics adventure is bound to become a classic of Spectrum programming and portrays the travels and adventures of the hero Cuchulainn through the Celtic afterworld, Tir Na Nog.

Cuchulainn strides tall, clear and purposeful along the paths of his world. Fore-, middle- and backgrounds scroll independently behind him, giving a convincing likeness of real movement. The camera angle can be altered so that he can be seen from four viewpoints and the scenery changes accordingly. The clouds roll, smoke billows, birds flutter.

Other characters are shown in equal detail and live their own lives whilst Cuchulainn obeys you in his search for the fragments of the Seal of Calum.

Not that you have to pursue the quest. You may choose to wander the roads and explore the intricacies of the world or follow secondary objectives that may well need to be completed before the major aim can be accomplished. Other characters may lay tasks on you too and events may force you in a certain direction at times.

Beware of the Sidhe, those powerful, dangerous and magical beings who also use the pathways. Combat may occur if all else fails and Cuchulainn can thrust with any weapon he may have found. To progress and survive you will need persistence, lateral thinking and good luck — though of course you cannot be killed, merely returned to

the beginning.

The game is not designed as a text adventure and uses the keyboard for movement and initiating various actions. Do not be misled by this into thinking that it is an arcade game — the program scope is vast and the world it depicts is alive and full of atmosphere. This is a full adven-

ture and, with no single or simple solution, may keep you occupied for a long, long time. Highly original and stunningly presented.

Grasshopper's leap

BECOME a master of the ancient oriental art of Kung-Fu without dislocating your back or having the wind knocked out of you.

Kung-Fu, from Bug-Byte, is described as a totally animated combat game for two players or one player and the

computer.

Each player controls one of the Kung-Fu fighters which must approach each other in a very inscrutable way before bashing the hell out of each other. Bug-Byte may enthuse about the graphics and crow about the cleverly designed fighters but, although the display initially looks impressive, movement is jerky and action slow. The fighters move as if they are robots.

Much emphasis is put on the techniques which the fighters can use when in action. Such moves are fairly authentic but the movement between a standing pose and making contact with the other player could have been made more realistic.

If you are going to play Kung-Fu with any kind of agility then you will need a joystick. You will then at least get some enjoyment out of it and not get whitewashed by a computer Ninja.

Game for the turtally warped

CLAIRVOYANTS should have a ball with **Turtle Timewarp** from Softstone. A brief examination of the cassette blurb reveals nothing about the game apart from the loading instructions.

After a nice loading screen information appears offering redefinable keys, joystick and start options. Fine, you say, and punch the start key, thinking that enlightenment will arrive before the game gets under way.

It does not. The only reference to the aim of the game is the brief 'save all turtles in this amazing game' on the back end of the insert.

The screen depicts a small 2D maze with questionmarks in the dead-end portions. You manoeuvre a turtle round the maze into the questionmarks. Sometimes that results in the

creation of unpleasant insects to add to those already chasing the turtle.

Sometimes a house is materialised which blocks off corners and makes life more difficult for the biting bees. If they get you, you lose a life. Once you have managed to explore all the questionmarks you move up a screen.

With no game concept to latch onto the business seems singularly pointless, though

the graphics are reasonably fast. The competent rendering of *Für Elise* was more gripping than the game and the choice of questionmarks as symbol very apt. A crystal ball could come in handy if you have one.

STILL THE BEST AVAILABLE

FDS KEYBOARD

Gold plate contact keys are used, guaranteed life of 10⁶ operations

Tough ABS case,
225mm x 350mm x 65mm deep

It's easy to see why the FDS Keyboard is the best selling Spectrum keyboard in the world. This stylish, slim-line keyboard has been transforming Spectrums world-wide. The keyboard contains all the graphic characters of your ZX Spectrum, plus additional function keys. It has 4 cursor control keys, an auto rub-out key, a separate key for full stop and comma, a full length space bar, shift keys either side and 2 function keys for direct entry into green and red E modes. The FDS Keyboard has real individual contact switches and not a membrane like most other Spectrum keyboards on the market which are more expensive. The case is easily adapted to allow the microdrive to fit inside along with the power supply. Fixing is simplicity itself and no soldering or technical knowledge is required.

£49.95
+ £2.50 p&p

FD42 KEYBOARD

The FD42 keyboard is still a firm favourite when it comes to a low cost option for your ZX81 or Spectrum. It is now a "standard" to Sinclair users. Neatly presented in an attractive ABS plastic case it transforms the Sinclair computer into a useful professional unit, providing all the graphic characters of the ZX81 or Spectrum, with additional keys to aid the user. No technical knowledge is required for installation.

---	--	---	--	--

Snowbound in Eden

DOWN to earth at last, Kim Kimberley, secret agent extraordinaire and saviour of the starship *Snowball*, has been framed for an act of sabotage. Fleeing the wrath of the woken colonists she steals a stratoglider and enters the atmosphere of Eden, the *Snowball's* destination. Condemned to death she has only a short time to hide in the luxuriant and bizarre undergrowth of the planet. The ship need only turn its engines towards her to fry her to a crisp.

So begins **Return to**

Eden, another brain scrambling adventure from Level 9 and sequel to **Snowball**. The presentation has changed — the game includes location graphics, yellow word display on a black background and 'write ahead'. That feature allows you to input text in a continuous flow without waiting for the cursor to reappear.

There are around 250 locations and Level 9 claims that the use of graphics has not adversely affected the amount of description or the general quality. Initial exploration

seems to back that up. If you find the graphics too slow they can be switched out.

Once safe in the jungle you must head out for the robot-manned city in the east. You must survive amongst the beautiful but lethal flora and fauna and avoid the robot devices which protect the city.

Problems and puzzles abound; this is a world unknown to humans and many plants or creatures have odd properties. Just trying to survive ten minutes is difficult — Level 9 keep rolling those

heavy dice on you but give you a few resurrections before finishing you off.

Exhausted compulsives of the firm's other works may just as well admit to themselves now that they probably won't be sleeping much for the next few months. Atmospheric and original.

Richard Price

Space, the final . . . ?

THE AGE OLD game of **Star Trek** has been resurrected to bring to your screens **New Cylon Attack**, from A'N'F Software.

Following the successful BBC version of the game, **New Cylon Attack** now boasts improved graphics and playability.

The storyline is familiar and brings to mind scenes of a portly Captain Kirk at the helm of the *Starship Enterprise*. You are pilot on board a supply ship carrying reinforcements to a distant planet in a war-torn galaxy.

The game portrays the sights of your laser gun in the middle of the screen with moving crosshairs. By moving these you are able to pinpoint the Cylons as they fly at the mothership.

As well as the radar scan-

ner there are a few other instruments which need constant monitoring including fuel situation, the state of your lasers and shield strength.

Your tanks may be refuelled during the game, which involves wandering round space looking for the mothership to dock on to. No fun with empty tanks and as often as not your fuel will run out just as she is in sight.

The graphics aren't astounding and the sound fairly average. **New Cylon Attack** is not the most original game but it is by no means the worst.

A better Basic

BETA BASIC, from Beta-soft, has already established itself as the standard extended Basic for the Spectrum. The launch of version 1.8 confirms that view with routines added to support Interface and microdrives.

The new language adds 30 new commands and 20 functions to Sinclair Basic and makes use of the structuring commands which are available for machines such as the BBC Micro and the Commodore SX-64.

The language is so much better than the Sinclair Basic. As well as the structure commands such as DEF PROC which creates procedures similar to those on the QL there are also programming aid utilities, graphics commands, easier access to the memory of the Spectrum and a real time clock which even has an alarm.

The utilities include an AUTOLINE number command, a command which TRACEs the number of a line as it is executed in a

program RUN and a horizontal screen SCROLL which behaves in a similar fashion to that on the ZX-81. There is also a ROLL utility which will scroll the screen vertically in any direction.

The 20 new functions include a PEEK which looks at 16-bit words, decimal to binary and decimal to hexadecimal converters, a SCREEN\$ command which recognises both ordinary and user defined graphics and a function to convert a number into a different format such as that of decimal currency.

It is a great pity that Sinclair Research has not brought out a version of Beta Basic on its new Spectrum+ either on board the machine or as a microdrive cartridge or ROM. Beta-soft turns Sinclair Basic from a good version of the language to a fantastic one.

HMV

Knocked for six

A "REVOLUTIONARY" concept, at least according to publisher Computer Records, has recently hit the streets in the form of a compilation of 12 popular games from companies including Bug-Byte, Quicksilver, Anirot and Ocean.

They have been released under the collective title **Select 1** and the company claims that if every game was brought separately the player would have to pay about £70.00. Quite a saving.

Some of the games are an-

cient but in the same package you will find more recent titles which include **Hunchback**, **Mr Wimpy**, **Missile Defence**, **Pool**, **Denis through the Drinking Glass** and **Moon Buggy**.

In **Denis through the Drinking Glass**, the idea is to help Denis Thatcher stagger to the Gravediggers Arms to revitalise the parts that Maggie cannot reach.

In this Quilled adventure from Application Software, Denis is at his wits end — there is not a drop of booze at

No 10. Escaping from Maggie's loving clutches is no easy matter and apart from the worry of being caught by the wife he has to negotiate sundry personalities as Mary Whitehouse and Ken Livingstone en route.

The player has only ten moves in which to find the elusive flask of gin which makes up Denis' breakfast. Without it he will fall into a stupor and the game will end. *Delirium tremens* sets in if at the ninth move Denis still hasn't had a swig.

Denis through the Drinking Glass gently mocks the Iron Lady and her retinue in a game which can be great fun.

Missile Defence from Anirot is based on the classic arcade game where you have to protect your city from a murderous alien attack. The game is quite fast, but your bomb sights move too slowly to contain the aliens on the higher levels.

Moon Buggy, also from Anirot, is a poor representation of the original game. The graphics are sketchy with an almost unchanging background, and the aliens are almost non-existent.

However, the package is very good value especially as a Christmas present. You may well have most of the games but even the three or four games which are new to you will make the package worthwhile. *Clare Edgeley*

Arthur's unoriginal adventure

REMEMBER the old dinosaur mazes? Moving along one square at a time you could turn right or left to enter side passages. **King Arthur's Quest** uses a similar type of movement system, though the countryside and rooms depicted are not bounded in the same way.

The wicked Morgana Le Fay has put a spell upon the land. The world is slowly dying and you must save it from the Enchantress and her magic. You begin in Merlin's cottage and must examine the grids to collect useful objects or meet the various characters.

There are nine basic actions each carried out by a single key press — a rather flimsy overlay is provided to show the relevant keys.

This is not a normal text adventure, given the very limited range of input, and may consequently appeal to a younger age group. The graphic displays are sufficiently pleasant, though unoriginal in style, and the response time is fast. There is a microdrive transfer facility but if you are killed during play you must reload.

How to make a touchdown

FOURTH down and three. Will you run or pass?

If that means little to you then you are clearly no fan of American Football. Recent television coverage of the sport has aroused an interest in Britain, and Argus Software has responded by releasing a simulation, **American Football**.

The game is a strategy version, in which you as the team coach select your style of attack or defence from a menu, and the computer, or another player, selects a response. The results are displayed on the screen with animated graphics rather in the style of **Football Manager**, with small figures moving into various positions and working through the selected plays.

American Football lends itself well to computer simula-

tion, as the real game is played as a series of tactical set pieces where the object is to gain as many yards from a single play as possible, before scoring a touchdown by taking the ball across the opponents' goal line. Since the game proceeds in fits and starts, the computer version does not lose so much realism as comparable versions of Soccer or Basketball.

Those who are not familiar with the sport are neverthe-

less unlikely to be enthusiastic about the game, as it only really becomes fun if you allow your imagination to visualise what is being simulated.

For those who do know something of the game, the program is much more fun, and can be heartily recommended. *Chris Bourne*

WELCOME TO THE MACHINE

Enter a sinister world of genetic manipulation and ideological brainwashing in *Deus Ex Machina*, Automata's unnerving vision of a future controlled by computers and monitored by the ever-present defect police.

Deus Ex Machina is a total experience. The game takes you through seven stages of life, as you struggle to maintain your humanity against the forces of control. Superb graphics and animation, of psychedelic intensity, are linked to a fully synchronised soundtrack featuring the talents of star actors and musicians.

There has never been a game like it; *Deus Ex Machina* will blow your mind.

COMPETITION

AUTOMATA, creator of the lunatic Pi-Man, is giving away 50 copies of *Deus Ex Machina* to *Sinclair User* readers. All you have to do is identify the fourteen titles of Automata games plus the name of a truly excellent magazine in our special wordsquare below. The answers may be spelt backwards or forwards, up, down or diagonally. Just to make life easier for you, we have given you one of the answers already. You will have to find the rest.

When you have done that, name the two personalities in the pictures, both of whom are involved in the soundtrack of the game.

Send the completed wordsquare, or a copy, plus the names of the two celebrities to *Sinclair User*, EMAP Business and Computer Publications, 67 Clerkenwell Road, London EC1R 2AU. The competition closes on January 18, 1985, and the first 50 correct entries pulled out of the hat after that date will receive a copy of *Deus Ex Machina*. Employees or associates of Automata or EMAP are not eligible for the competition. Only one entry per contestant is allowed.

If you've got a 48K Spectrum™ and accounts to manage, OCP will make the job easier and faster.

All our business and utility programs are Sinclair Microdrive Compatible, and the Plus 80 versions are versatile enough to drive full size 80 Column Printers through most centronics and RS 232 Interfaces including the ZX Interface 1. However, our standard programs (except Stock Manager) only work with ZX and Alphacom 32 Column printers.

The magic of MACHINE CODE has enabled us to produce the very latest "on the page" presentation which lets you enter and edit data naturally, as if filling in a form.

FINANCE MANAGER £8.95 PLUS 80 £19.95

Voted the best in its class by the Sinclair Users Annual, this easy to use program is a powerful and flexible aid to practically all domestic and business accounting applications. Show up to 255 separate accounts with running totals, and review standing orders as you scroll back and forth through your accounts. But that's not all, this program automatically raises a corresponding debit or credit for every entry, and will even open a new account if an entry features an unrecorded account name.

Having all your finance records so neatly stored is the height of efficiency! The program is entirely menu driven for ease of operation, yet the facilities are so extensive you'll soon wonder how you managed without it.

ADDRESS MANAGER £8.95 PLUS 80 £19.95

A very useful MACHINE CODE application program with limitless applications at work and at home.

Manage your address book with efficiency and speed! Address Manager stores up to 350 names, addresses, and phone numbers — depending on their length. Or up to 1200 individual names/titles/references. The Plus 80 version also embodies a comprehensive Label Printing routine.

In the office, Address Manager can store internal phone directories, store and analyse customer's records, and much much more.

If you've already got Finance Manager and/or Address Manager but in non-Microdrive format, and you'd like to update them we'll give you a £3 rebate towards the cost of a Microdrive Compatible 32 Column, or £5 off the plus 80 version. This offer is available via mail order only.

The OCP range includes: VAT Manager, Address Manager, Finance Manager, Stock Manager (80 Column only).

Means serious business!

VAT MANAGER £8.95 PLUS 80 £19.95

Your VAT 100 return need no longer be a headache! Simply key in the Gross or Net values of all the period's sales and purchase invoices and VAT Manager will check, analyse and total all the relevant details. Available in 32 Column or Plus 80 versions, VAT Manager will check all calculations automatically, and will even work out details of exempt totals where the trader is not required to pay VAT. This is performed with its CLASSIFY feature for types of transactions, and GROUP feature for more detailed analysis.

PLUS 80 STOCK MANAGER £19.95

Provides a controlled stock environment for up to 600 different product lines.

The program has facilities for the production of invoices, sales totals, price lists, and shows stock status, stock adjustment and re-order requirements.

No business should be without this crucial Microdrive program. Now you can compute your entire stock balances all on one program - Stock Management has never been so easy! Coupled with a suitable printer it will take advantage of the 80 column width printout to produce quality hard copy.

Now the most helpful aids to business efficiency are near as your local software stocklist. Call in soon and see the latest in OCP's exciting range of business software. Available from larger branches of WHSMITH or mail order direct.

For instant purchase contact the **OCP** Hotline with your details. Telephone: 0753 889 055

A British expedition dares to recreate Scott's last journey to the South Pole. Sid Smith asks why they want a QL.

Pole-star QL on Southern Quest

A BRITISH team is planning a year in the Antarctic and the first walk to the South Pole since Scott's 1912 expedition — and is taking a QL.

The five Britons are about to set off on one of the world's worst journeys. They will camp on the Antarctic ice for at least a year in temperatures down to -60 Centigrade, and then two of their number will attempt to walk almost 900 miles to the South Pole, pulling all their supplies behind them on specially designed man sledges.

Throughout their stay, a Sinclair QL will be solely responsible for the management of scientific data, for the production of a book about the expedition, and for the logging of day-to-day radio contact with the two men on their solitary, 85-day journey.

"We chose the QL because it was much the most exciting computer available," says expedition manager William Fenton. "Because it was small, because it was powerful for its size, and because we thought we'd take something adventurous. And because we liked Clive Sinclair."

Their expedition, *In the Footsteps of Scott*, grew from a desire to retrace the

historic journey of Robert Scott to the South Pole seventy years ago.

However, the five men have no desire to repeat the ultimately fatal outcome of that earlier trip, and are counting on the best of modern technology — including the QL — to see them through.

"The difficulties of walking 900 miles across the Antarctic are almost insurmountable," says Mike Stroud, the expedition doctor who will be using the QL more than anyone else. "It's only by sticking to a most rigid diet, in the form of calories per ounce, and by using the strongest and lightest modern materials for the equipment, that the men can hope to get through."

Their acquisition of the Sinclair device is only part of the £750,000 worth of sponsorship they have already managed to raise. Products as diverse as Shell oil and Bernard Mathew's turkey breast rolls have been supplied as a result of the highly professional marketing of the expedition, and are now in a warehouse packed with equipment in London's West India Dock.

"Everything here has been given to us," says Dr Stroud, waving an arm over mountains of low-temperature clothing and two years' supply of food. "We started out with nothing. Now we've a ship and all these stores and it's all come from letters and phone calls, and gradually increasing credibility."

In return, the expedition has been able to offer their sponsors the benefit of the most rigorous field testing which any product could ever wish for, and a huge amount of highly desirable free publicity.

"We had a major press conference here a couple of weeks ago, with six TV channels and about fifty newspapers

from all over the world. We've had Princess Anne down here on the ship, and we've been on *News at Ten* three or four times."

What about the QL? The expedition members are already making plans for spin-offs they can market after they come home. Apart from a film of their epic journey and an exclusive two year contract with *News at Ten*, they have also acquired a £50,000 advance from publisher Jonathan Cape for a book about the expedition. That book will be written on the Sinclair QL.

"Unfortunately," says Dr Stroud, "none of us have a clue about computers at the moment. But we're counting on the QL being easy to pick up and use, even for a beginner."

The machine will stay in the expedition's base camp and therefore will not be exposed to the hazards of sub-zero temperatures and 100 mph winds.

Dr Stroud explains the scientific uses he plans for the computer. "I have a whole series of observations to perform on the effect of Antarctic conditions on the human physiology."

"Obviously, I'll be looking at the changes which take place as a result of low temperatures, but I also want to examine the way the human metabolic rate adapts to changes in the amount of daylight. As the Antarctic day changes between perpetual day and perpetual night, I'll be using the QL to record and manipulate data about alterations in body temperature, in food intake and in sleeping patterns."

Many of those alterations will depend on the effects of the special food and clothing which the expedition will be taking, particularly for the two-man push to the South Pole.

"We've learned a lot from the records kept by members of the disastrous Scott expedition. One of the worst tortures they faced was the way in which perspiration from their bodies passed into their clothing and sleeping bags and then froze, so that they were eventually

BREAKTHROUGH!

SPECTRUM DISK INTERFACE

The Ultimate for the Spectrum owner!

Spectrum owners! Now you can upgrade your machine to take *full advantage* of the sheer speed and convenience of floppy disk operating.

Greater storage! Faster access! More operating flexibility!

Disk drives were specifically designed for use with computers so programs and data can be stored and accessed quickly and safely. Also a disk drive uses random access to get programs and data from any part of the disk. The speed? Only a few seconds!

Upgrade *now* with this low-cost Beta disk interface from Technology Research that uses only 128 bytes of Spectrum memory and gives you *instant* operating compatibility with any disk drive that the BBC micro uses!

Each interface comes complete with a 5¼" disk with utility programs *already loaded*. From the word go you can transfer the contents of one disk to another or make copies of individual programs or data to any other disk. There will be no problems with your upgrade to DISK operation as the LOAD and SAVE commands work equally well with cassette or micro-drive.

Take advantage of this *offer* and get the compact yet powerful Beta Disk Drive as well, made by TEC (as supplied by Cumana), and be up and running on disk *in minutes*!

The Beta disk interface; the Beta disk drive. Only from Technology Research. The sooner you order, the sooner you'll be enjoying all the benefits of full disk control!

Technology Research Ltd.

Features

- EPROM disk operating system for ease of operation
- Available in Single Density and Double Density
- Uses only 128 bytes of Spectrum memory
- Compatible with 40 or 80 tracks, single or double-sided disk drives
- Works equally well on 5¼", 3½" or 3" disks, with upgradability built-in from 100K to 2.6 Mbyte
- Supports up to four disk drives
- BASIC program merge facility
- Duplicate Spectrum connector included
- Uses Spectrum key words
- Random access of data for fast operation
- It costs **less** per byte of storage to switch from tape to disk

NEW
BETA INTERFACE PLUS
BETA DRIVE!
The complete package
from £249.75!

Introducing the Sprint

UK & World Patents Pending.

**It loads Spectrums four times faster
than an ordinary cassette player,
uses standard cassette software,
and has improved loading reliability.**

All for just £64.95.

The new Sprint from
Challenge Research will load

and save Spectrum programs at four times the speed of
conventional cassette players, this even applies to
standard program and games cassette software that has
been pre-recorded at normal speed. All this plus
improved loading reliability is available for just £64.95
inclusive of post, packing, VAT and a 12 month guarantee.
The Sprint is dedicated to both the 16K and 48K Spectrum
and provides an innovative but inexpensive new concept
in cassette tape storage.

Use of the Sprint is simplicity itself:

- Retains the standard Spectrum commands and format.
- Advanced digital circuitry and signal processing
improves loading reliability and eliminates volume setting.
- Simply plugs into the Spectrum port — no interface or
external power unit is required, it even has it's own
expansion slot so that you can still use other peripherals
at the same time.
- A full 48K program will load or save in 75 seconds rather
than five minutes with a conventional cassette recorder.

Spend less on a Sprint.
Spend more time working your

Spectrum and be the envy of your friends.

If you have Visa or Access cards you may phone your
order to ensure faster delivery by calling Potters Bar
(0707) 44063, or post the coupon below.

Please allow 28 days for delivery. If you are not delighted
with your Challenge Sprint simply return it within 7 days
and we will refund your money in full.

CREATIVE SPARKS

THE NO. 1 QUIZ GAME FOR THE 48K SPECTRUM

BLOCK-BUSTER is an exciting quiz game for ONE or TWO players and will appeal to a wide range of ages and skills with nine levels of play against the clock. The game tests speed of recall involving anticipation of the question as it 'unfolds' across the screen and speed of response dependant on the level of play.

BLOCK BUSTER is supplied with the FIRST ADDITIONAL QUESTION TAPE FREE to maintain the challenge of the game. Now available at good computer shops or direct with cheque/P.O. for £5.95 inclusive. ACCESS and VISA orders taken on our 24 Hour Hotline.

U.S. No. 1
Smash Hit

Scott Expedition

continued from page 65

carrying many pounds of ice, locked inside the goose down which was intended to protect them."

The expedition hopes to get round that problem through the use of a vapour barrier inside their insulated suits and sleeping bags. Most of the body's moisture will be trapped next to the skin by this barrier, thereby preventing the build-up of ice in their clothing, and helping to prevent dehydration in the arid Antarctic air.

"We'll probably get a bit sweaty," says Dr Stroud, "but that's certainly better than the alternative."

Dr Stroud won't be one of the two men pulling sledges to the South Pole. That dubious pleasure is reserved for Robert Swan and Roger Mead, who between them have clocked up an impressive list of qualifications for the job — things like solo bicycle rides from Cape Town to Cairo, the circumnavigation of the Icelandic ice-cap, and a winter ascent of the north face of the Eiger.

Unlike Captain Scott, they will not have the help of ponies and tractors for any stage of their journey; nor will they be able to rely on periodic stops at pre-arranged supply dumps. Instead, they will make the entire 883 mile journey

from base camp to the Pole on their own two feet, pulling behind them two sledges containing every ounce of their supplies.

They will also be uncomfortably aware that since Scott's time, nobody has attempted a walk to the South Pole, and that not one of the Scott party got back alive.

"No, we've got no desire to imitate the Scott expedition too closely," says a member of the present enterprise with a smile. "We've all heard the story of their last days and of Captain Oates who walked off into the snow rather than slow up the expedition."

Nevertheless, their awareness of the tragic precedent for their walk to the Pole is very apparent to an outsider; constant references are made to the superiority of their equipment over that of the 1912 party, and in the galley of the expedition's ship some mordant wit has deliberately mis-spelt the label on their porridge container. "OATES" is what it says.

Even the presence of a Sinclair computer on board owes something to Captain Scott. "Dundee was the big connection here," says William Fenton. "Scott bought his ship there, and we found out that many of the parts for the Sinclair machine are made in Dundee.

So we had to get a QL."

The long walk of the two modern explorers will differ from that of Scott and his party in one large way and in a number of small ones.

The large difference is that, unlike Scott and his party, they won't have to walk back. Instead, a ski plane will fly to the South Pole and collect them for the return trip to base.

"For a large part of Scott's walk he was floundering along, sinking to his knees in snow. He did have skis, but they were primitive things which kept falling apart. On our walk to the Pole, though, we'll have the best modern composite skis."

As an insurance policy, each of the two sledges will have enough supplies for both men — in case one of the sledges is lost.

The five men of the expedition will be camped on the Antarctic for a year, much of that time spent isolated from any outside contact. What will they do if their QL breaks down?

"We'll be scuppered," says Dr Stroud.

"No, it won't be as bad as that," laughs William Fenton, "We'll be able to manage by keeping written notes and by using a calculator. We'd certainly be disappointed, though."

For a better image

The Sinclair QL gives you the best in micro technology. So why entrust it to a screen that cannot match this?

A blurred, incomplete or fuzzy image can ruin even the best program. Not to mention the strain it may put on your eyes.

Now, we can offer you the monitor to match the micro.

The Prism QL14 colour monitor has been designed to meet the exact needs of the QL.

It gives you clear, pin-sharp graphic images, and the ability to display the full 85 column text available on the QL.

And the light-weight Prism QL14 is fully portable, incorporating a retractable handle and is provided with the necessary connecting cable.

Sound Generator

This sound board together with the spectrum provides all the hardware to produce music and sound effects as found on full size monophonic music synthesisers, ie.

Three audio channels with programmable volume.

Internal audio amplifier and speaker, with jack socket to external amplifier.

The filter allows many sound synthesis effects to be programmed that are not possible on the usual sound generators for personal computers. The Ricol Sound Generator sounds more like a "real" music synthesiser with its swept filter and science fiction effects. The use of the low pass, band pass and high pass filters mean that programmed drum sounds are now easy to produce.

Ricol Electronics.

In the second of our fast storage reviews, we compare the SPDOS and BETA disc systems

LAST MONTH we looked at tape-based fast storage systems for the Spectrum. This month we turn our attention to discs, one of the first and one of the latest, those from Technology Research and Watford Electronics.

The Spectrum is seen by many people as only a games machine. One of the reasons for that is the limitation of having a cassette interface. The BBC, Commodore and Amstrad can all have disc interfaces designed by the manufacturer; the Spectrum had the microdrive.

That delay caused a number of manufacturers to design disc interfaces for the Spectrum but, as yet, none has been accepted by software houses as a standard. Until that happens users will buy their software on cassette, and then convert it to use on disc.

The Beta system from Technology Research was first reviewed in *Sinclair User* in March 1984. Since then it has undergone a number of improvements and is now the best selling interface on

More memory less labour

the market. SPDOS from Watford Electronics has been released recently; it has the backing of a company which has made a name for itself by designing and selling interfaces for the BBC.

Both interfaces will accept both 5¼in and 3in drives in 40 or 80 track, single or double-side format. SPDOS can also accept old 35 track drives. Up to four drives can be used but each must have its own power supply as the Spectrum does not have any spare capacity. Many of the drives advertised as suitable for the BBC do not have a power supply and that can cost another £30.00.

The most popular system is 5¼in and discs cost between £1.75 and £3.00 each. The amount of information they can hold will vary according to the drive and the system used to record it. Both interfaces use a form of double density recording; Beta divides each track into 16 sectors of 256 bytes per sector, whereas SPDOS uses 10 sectors of 512 bytes. A 40 track, single-side drive, allowing one track for the directory, gives 156K and 195K respectively.

The speed of a system depends on several things, including the speed of the drive. All discs spin at 300 rpm, five revolutions per second — but the time it takes to move from track to track will vary. Both systems can work at a number of speeds, from 6ms to 30ms for SPDOS and 6ms to 48ms for Beta. The Beta also incorporates a one second delay, if the drive is not spinning, to allow for older, belt-driven drives to reach operating speed.

Another factor is the method of reading the sectors; Beta follows the usual practice of reading alternate sectors, so the disc has to make two revolutions per track, and SPDOS can read the sectors one after the other and so should be quicker.

The Beta interface, unusually, lies flat from the back of the Spectrum, consequently it is compatible with all full-sized keyboards. It has a through port for other add-ons and is compatible with both the Kempston E printer interface and Sinclair Interface 1. On the right is the connector for the disc drives, which follows the same standard as the BBC and has been successfully used with a BBC drive. To the left is a

socket for the Spectrum power supply.

On power up you are presented with the copyright notice and an invitation to enter a password. This is the only system which uses passwords, which can be any combination of characters; if you are forgetful you could give all your discs a password corresponding to the ENTER key and so you need only press that in response to the prompt.

You are then into the DOS — Disc Operating System — and presented with:

A>

to remind you that you are in the DOS and that the default drive, the one to which all commands will relate, is the A, or number 1, drive. You can now use any of the DOS commands directly or enter Y to RETURN to BASIC. You can return to the DOS at any time by entering RAND USR 15360 but that is rarely needed.

All the normal Spectrum tape commands, apart from VERIFY, can be used by the disc: the command is simply preceded by RAND USR 15363: REM:.. If PRINT USR or LET variable=USR is used then the number returned will be the error message, 0, meaning no error. Calculated parameters or variables can be used as with the tape command.

There are only two variations: by adding a third parameter when saving CODE it can be made to auto-run, and then RUN, rather than LOAD, must be used to auto-run a program. That applies to both CODE and BASIC. When LOADING and SAVING if the second character of the file name is a colon and the first is A, B, C or D then the command is taken to apply to that drive. That is a useful way to avoid changing the default setting.

The commands that relate only to the drive are ERASE, which will erase a file, CAT, to obtain a catalogue, USR, which can be used to change the password on the disc and NEW, to change the name of a file. MOVE has a special use. When the system saves information to the disc it is stored, in the interests of speed, in successive sectors; when files are erased gaps are left and MOVE simply moves the files up to fill the

continued on page 76

Herbie Briggs has just destroyed the myth that all floppy discs are created equal.

They seem equal. Until you look at the seams.

That's where equality ends.

Most companies seal their discs with a spot here, a spot there. Leaving most of each seam not sealed at all.

Sooner or later, the seams might do what comes naturally: they bulge. Warp. Pucker. Open up.

Pens, pencils, fingernails—even a four-year-old's, like Herbie—can catch and snag in those wide open spaces.

That's sloppy. And dangerous. Because if you put a sloppy floppy into your disc drive, it can jam your drive. Ruin your drive head. Lose your data.

So much for their seams. Ours are different.

THE SLOPPY FLOPPY:

Sealed with a spot here, a spot there. Leaving unsealed seams everywhere.

Memorex uses a process we developed, called Solid-Seam Bonding.

Solid-Seam Bonding seals shut every inch of every seam of every Memorex® floppy disc. Tight as a drum. That makes the Memorex

floppy stiffer. Stronger. And your data safer.

To resist bulging, warping, puckering, or opening up.

MEMOREX SOLID-SEAM BONDING:

Every inch of every seam is sealed shut. Tight as a drum.

To resist all the things that can jam your drive, ruin your drive head, or lose your data.

Which proves that a Memorex floppy disc isn't equal to all the others. It's better.

Solid-Seam Bonding is just one example of the extra care that goes into every Memorex floppy disc. Be it 8", 5¼" or the new 3½". Extra care that lets us guarantee every Memorex disc to be 100% error-free.

The next time you're buying a floppy disc—or a few hundred of them—just remember this:

It's always better to be safe than sloppy.

For more information on the full line of Memorex quality computer media products, including computer tape, call Memorex U.K. Ltd., 96-104 Church Street, Staines, Middlesex. Tel: 0784 51488

Your Data. When it matters, make it Memorex.™

MEMOREX

Memorex is a registered trademark of Memorex Corporation.

© 1984 Memorex Corporation

A Burroughs Company

Mass Storage

continued from page 73

space. PEEK and POKE can be used to randomly read information from, and send it to, the disc. To change the default drive *'x:' is used where x is the drive. All those commands must have the usual prefix.

The utility disc supplied with the system contains two other commands: FORMAT, to format the disc, give it its password and an identifying name; and COPY to copy a single file or the whole disc in one go. If you have only one drive then prompts are given to swop the discs.

The instruction booklet gives examples of each of the commands and is written with the novice in mind. Details are also included on how to use the system from within your own machine code programs. The assembly listing included for that contains an error, having the line LD (nn),nn, which must be changed to include a register. The index at the back lists the commands, error messages and pin-outs.

The SPDOS, unlike the Beta interface, sits up vertically from the back of the Spectrum. It has a through port for add-ons but is not compatible with Interface 1. The lead for the disc is connected on the right hand side, using a disc connector onto the PCB, like the TRS80. On the top at the front is a LED and a reset button. The lead for the power supply has to be threaded through a hole in the interface. It will fit most full-sized keyboards, the only exception being the Transform which is rather high at the back.

Powering up, or pressing the reset

As with the Beta all the normal tape commands can be used in the usual way, apart from MERGE which will always auto-run. To make them relate to the disc they must be preceded by PRINT #4:

The commands that relate to the disc, which must also use the PRINT #4 prefix, are: CAT, to obtain a catalogue — this can be followed by a string so that only those files containing the string are listed; CLEAR which performs a block delete; ERASE to erase a file — this includes a wild-card facility where ^ can stand for any character; MOVE renames files or can be used to copy them.

SPDOS supports sequential files and a number of commands are used for that: OPEN # and CLOSE # are used to open and close files; PRINT # sends information while INPUT # and IN-KEY\$ # are used to read it back. To use FORMAT the original system disc has to be in the current drive. That gives the disc its identifying name. Unlike the Beta system errors are returned as a Basic error message.

The system disc contains two other system utilities. The first of those is "copysys", a program which will copy the system, except for FORMAT, to another disc — necessary if you want to use CAT on the other disc. The other program is "minidos", a stripped down version of the system which does not, as far as is apparent, include the sequential access commands. Also on the disc is a simple address book program which shows the use of sequential files plus three commercial programs, **Tasword**

```
10 FOR n=1 TO 30
20 SAVE ("test"+STR$(n)) CODE
32000,200
30 NEXT n
```

— and changing line 20 to suit the system, SPDOS took 58 seconds in saving, 23 loading and 29 erasing while the Beta took 55, 33 and 47 respectively. Formatting depends on the number of tracks and sides; with an 80 track, single side disc SPDOS took 2 min 43 seconds and Beta 1 min 10 seconds.

If you only want to write your own programs then SPDOS with its overlays, sequential access and faster loading times has the edge.

If you also want to put your favourite commercial programs on disc then the Beta system is more suitable, unless you are into machine code. The system occupies just 112 bytes of memory below the Basic program area; it also uses the printer buffer when loading code but when doing so it saves the buffer to the disc, carries out the command, and then reloads the buffer.

Both systems allow for a large number of directory entries, Beta 128, and SPDOS 144. With the latter you have more space per disc. Both require additions to the commands, the syntax for SPDOS being slightly easier to enter from the keyboard. Both sell for similar prices, Beta £99.00 inclusive, SPDOS £99.00 plus VAT.

The winner in the contest between the disc drives will be the one which receives most software support. Both companies claim to be talking to software houses. In the meantime more systems are due to be launched. Next month we look at those, including the new system from Thurnell Electronics, priced at only £150.00 for both interface and drive.

Watford Electronics, Cardiff Road, Watford, Hertfordshire. Tel. 0923-40588
Technology Research Ltd, Unit 18, Central Trading Estate, Staines, Middlesex, TW18 4XE. Tel. 81-63547

button, automatically loads the operating system into memory. If a program has been saved with the name "AUTO", in upper case, then that will also be loaded. If the program is in BASIC and was saved using LINE then it will auto-run. CODE will auto-run from its first address.

II, Masterfile and Omnicalc 2. Those have been converted to use the system and include demonstration data.

Choosing between the two systems will depend entirely on what you want to use a disc system for. Both are very quick; using the same test program as last month that is,

TURBO CHARGE YOUR SPECTRUM

Outperforms any Spectrum interface

The unique Turbo interface from Ram gives you all these features – and more – in one unit:

- * A variety of interfaces including: Rom cartridges, two 9-way D plugs for standard joysticks, PLUS full expansion bus at rear.
- * Compatible with Kempston and Protek protocols.
- * Works with latest Quickshot Mk II auto rapid-fire joysticks!
- * Choice of Rom cartridge or tape cassette software.
- * Instant program loading with cartridge software.
- * Built-in power safety device – unique to Ram Turbo.
- * Full one year guarantee.
- * Immediate availability – 24 Hr despatch on receipt of P.O./credit card details (cheques – seven days).
- * Incredible value – only £22.95.

So don't wait around – simply complete the coupon and send it to us today.

Or call our credit card hot line on 02514 25252. (Access and Visa welcome).

THE **sinclair** VISION QL MONITOR

£299.00
INC VAT

Developed in conjunction with Sinclair Research Ltd., the Sinclair Vision QL monitor is based on proven Taxan monitor technology.

Its black angular design and 12" non-glare tube result in a remarkably compact unit that complements the QL in looks and performance – including 85 column text display.

The Sinclair Vision QL is the ideal monitor for high resolution colour graphics and professional business applications.

Comes complete with cable and full 12 months warranty.

Specifications:

Input form:	RGB
Amplifier type:	Linear
Video Bandwidth:	More than 18MHz
Dot (Slit):	0.38 mm
Display area:	214 mm (H) x 158 mm (V)
Dot resolution:	640 (H) x 440 (V)

'Sinclair' and 'QL' are registered trademarks of Sinclair Research Ltd.

Psion Chess: Queen of the chequered board

QL CHESS is the most powerful game available for the QL and, not surprisingly, is produced for Sinclair Research by Psion.

The most remarkable attribute of the package, according to Psion, is its three-dimensional representation of board and pieces. Although, on first sight, those graphics seem complex the 3D representation has been created with the minimal amount of effort by putting the board into 3D perspective. When one piece takes another it moves in front of it but when the knight, for instance, advances over a piece it moves behind.

The display is effective and watching the computer play through a demonstration will show you what can be achieved by a programmer who is more than competent on the QL.

QL Chess also has the attraction of being one of the fastest computer chess programs on the market. In Level Zero Novice Mode, for instance, it can make more than seven moves in less than a second.

The program supports a normal, birds-eye view, representation of the chess board. Psion has made the format of the display similar to the one used in its suite of business programs for the QL. The options and commands are shown at the top of the screen, the conventional view of the board at middle-right and a list of moves which are scrolled up middle-left. The list of moves can be output to a printer which will then keep a hard copy of the game as it progresses. In that way you will be able to see where you went wrong in a game or, in demo mode, how to improve your standard of play.

As our copy of the program was a preview version there were bound to be some disappointments. The major one involved the 3D screen display where the commands and options were not listed. A good memory is required if you do not want to keep moving back to the overhead 'flat' representation. Psion could have made the board smaller and incorporated a command/option panel at the bottom of

the screen which would have made switching between options easier.

There are 12 levels of play which can be interchanged at any time during a game, except when the computer is thinking about a move. The first level is Zero and has been designated for the novice by the authors. It produces a simple but robust game and makes its opening move in a fraction of a second.

Any beginner will be more than flustered by the speed at which moves are made. Psion has come close to the precipice of unplayability. We are sure that the game could hold a record as one of the fastest chess games around.

The other levels range from one to 11. Level One plays at two minutes a move and Level 11 at a maximum time limit of four minutes. Above those levels Equal Time makes the computer

move within the time last made by the human player and Infinite Time lifts all the restrictions of the clock. There is also a Wait option available to the human player which suspends the game. That will be useful if cheating on the clock is required.

Once you have set up the display and level to your satisfaction you can start a new game by pressing \$. All the pieces are put into their ini-

and simplest, is to use Hint which will tell you the move the computer would make in your place. It is also possible to make the QL take back the best move it can make and substitute the next best. In that way the QL can be forced to play a second-rate game and you could come out on top.

Psion has also built an option into the game which allows you to see the strategy the QL is taking. The Analysis option displays the moves which the computer considers before making its final choice and it will give you some idea of the patterns being created in the game.

QL Chess is likely to take a well-deserved place in the history of computer chess. It could rank with such names as Sargon and Sci-Sys which, undoubtedly, it could outplay if only in terms of speed.

The QL is an ideal chess machine and the software which Psion authors have written to maximise its powers is state of the art. The game's prowess has already been demonstrated at the European Chess Championships in Scotland and its usefulness to someone seriously interested in chess is undeniable. It can beat the masters.

Psion has also thought of the beginner. There is a full set of Help routines within the program. These should answer most queries of a technical or general nature.

If you own a QL then QL chess should certainly occupy a place in your software library, even if it keeps giving you a sound thrashing. The style and quality of the product would make it attractive at double the outlay.

It is also the first program which QLUB members will get at a discount price. The discount alone makes membership worthwhile.

THE Runes OF Zendos

- High Resolution Graphics
- Full Animation
- Sentence Input
- 12 Separate adventures
- Sound Effects

The tiny principality of DORCASIA was a pleasant fertile land until the wizard ZENDOS used his evil powers to cast the country into perpetual darkness until all citizens pledge obedience to him.

It is known that through the SPELL OF DARKNESS Zendos has trapped the spirit of each month into one of 12 GOLDEN TEMPUS RUNES or RUNIC HOUR GLASSES hidden deep within his mysterious and magical castle.

As the land dies in the grip of the black desolation a hero must be found to locate and destroy the 12 hour glasses thus releasing the months and returning Dorcasia to the natural forces of the seasons.

Each glass has a RUNIC inscription around its base which you must read and understand. Only saying these words will lift that part of the spell. To protect the hour glasses Zendos has placed them in 12 separate rooms in his castle, each room linked to a different exterior gateway by a devious route.

Depending on which entrance you select Zendos casts spells which change the locations of rooms within his castle to confuse you. The menacing creatures and challenging problems which confront you at every turn mean that only the brave and the clever will succeed.

THE ORACLE'S CAVE

Our best seller available for the
48K SPECTRUM and COMMODORE 64.

Oracle's Cave is a unique adventure game featuring continuously displayed high resolution graphics and text, a new cave layout and event sequence for every game and a time limit on every adventure.

Extend your 16k Spectrum to 48k for just £27.00. And get a Free program worth £4.50 into the bargain.

SP48B, 32k Memory Extension with Program — £27

The SP48 simply plugs into the sockets provided by Sinclair inside your Spectrum and turns your 16k machine into an absolutely standard 48k ready to run 48k programs.

The SP48 fits Issue 2 and Issue 3 Spectrums. Full step-by-step instructions are provided. Fitting is easy and there is no soldering.

The SP48 carries our full warranty and all our customers enjoy the benefits of our renowned product support.

And you get a free copy of Beyond Horizons, and educational program which has already enlightened thousands of 48k Spectrum owners about the inner workings of their computers.

48/80 FORTH

This compiler and editor is fast becoming recognised as the most professional and highest quality implementation of the FORTH language on the Spectrum. FORTH gives you the speed of machine code without the tedium of machine-code programming.

All the Spectrum's excellent graphics commands are retained including DRAW, PLOT and CIRCLE. Real arcade quality sounds can be produced using BEEP.

More advanced FORTH programmers will find that 48/80 FORTH provides a complete implementation of FIG-FORTH, including the sophistication of BUILDS, DOES and CODE.

Each 48/80 FORTH cassette includes a separate FORTH editor which uses part of RAM as if it were disk. The 48K Spectrum allows a 16k RAM 'disk', while leaving nearly 20k of dictionary space. A comprehensive user-manual is also included, which covers both compiler and editor, and has a lucid beginners introduction.

Extensions to 48/80 FORTH will shortly be available to existing customers at a nominal charge. These will include floating point arithmetic, and microdrive handling.

A wealth of free information is yours for the asking with the TTX 2000 Teletext adaptor.

The new TTX 2000 adaptor lets you use Teletext in a way that's never been done before.

Now you can link together your ordinary T.V. and your standard Spectrum and call up a wealth of broadcast information on Ceefax and Oracle covering just about everything from news, sport, reviews and entertainment to competitions, financial advice, advertisements and consumer topics.

You can store Teletext pages on Microdrive or produce immediate hard-copy printout, and download the Spectrum Telesoftware being jointly transmitted by O.E. Limited

and the broadcasting companies exclusively for TTX 2000 users (upgrade downloader ROM available shortly).

The TTX 2000 is very simple to use and no modifications at all are needed to your Spectrum or T.V. Once you're set up you don't pay a penny more, no matter how often you use the system. Just think - no connection charges, subscriptions or "access time" bills.

Just a few simple commands let you find your way into the information rich world of Teletext.

Return the coupon, or contact our help desk for more information.

GHSTBUSTERS™ THE COMPUTER GAME.

BY DAVID CRANE

©1984 COLUMBIA PICTURES

Yes. Ghostbusters is a computer game, too.

The game play follows the film with incredible accuracy. Even down to the chart-topping music score.

Your task is to rid the world – and in particular New York City – of a cataclysmic plague of ectoplasmic nasties.

Play it well and we give you a Ghostbusters franchise – with your own secret account number. Use this number and the money it brings you, to buy the same ghost busting gear they had in the film. (Don't worry – we'll give you some money to get started.)

You will have earned it. And you can use it to go to undreamed of levels. Don't try to use someone else's number, we'll find out.

From then on, it's you against the ghosts. All the way to the Temple of Zuul.

Where the final battle begins...

Designed by USA's David "Pitfall II and Decathlon" Crane and running on Commodore 64 cassette and disk and Spectrum. Coming soon on other systems.

ACTIVISION®
Your computer was made for us.

AVAILABLE FROM SELECTED BRANCHES OF BOOTS, WH SMITH, JOHN MENZIES, LASKY'S, SPECTRUM, RUMBELOWS, WOOLWORTH AND GOOD COMPUTER SOFTWARE STORES EVERYWHERE.

Seeing is

See the pack – see the screen – see the game.
See the difference the moment you pick up one
of the games from Firebird's new Silver Range.

The difference is that our packs show the high
quality you'll see on the screen when you play,
so you know exactly what you're buying.

Here's a sneak look at three of the NEW games:

RUN BABY RUN

RUN BABY RUN is a demanding cop chase around five derelict locations. You, the getaway driver must dispose of six pursuing police cars and elude the seventh car's fire power to make good your escape. It's not as easy as it sounds...

BOOTY

Well shiver me timbers and splice the mainbrace and pass the grog, me hearties. Here be the greatest pirate adventure of them all, aboard that scourge of the Seven Seas – the dreaded Black Galleon. Feast yer eyes on the BOOTY-ful treasure stored in 20 holds. There be pirates, parrots and fun galore. If you don't like it, matey, we'll hang you by the highest yard-arm!!!

CRAZY CAVERNS

Ten Crazy Caverns, ten hungry mouths to feed. Line up the Crunchy Cubes and cannon them into the Craving Craw. Watch out for the Crazy Crashers coming to convert your little Cubey Crammer into a Crushed Crisp. It's a cracker!

Look out for these games in the FIREBIRD silver range at selected high street stores.

SPECTRUM: THE WILD BUNCH · BOOTY · MR. FREEZE · TERRA FORCE · VIKING RAIDERS · MENACE · EXODUS · RUN BABY RUN · CRAZY CAVERNS · BYTE BITTEN.
COMMODORE 64: BOOTY · MR. FREEZE · EXODUS · HEADACHE · ZULU · GOGO THE GHOST.

VIC 20: SNAKE BITE · MICKEY THE BRICKY.

BBC MICRO B: BIRD STRIKE · GOLD DIGGER · ACID DROPS · DUCK! · ESTRA · THE HACKER.

believing

The same high standard applies to all twenty games in the range and all are available at the remarkably low price of

£2.50

PROGRAM PRINTOUT

GRAPHICS INSTRUCTIONS

Instructions for graphics characters are printed in lower-case letters in our listings. They are enclosed by brackets and separated by colons to distinguish them and the brackets and colons should not be entered.

Inverse characters are represented by the letter "i" and graphics characters by "g". Thus an inverse W would be represented by "iw", a graphics W by "gw", and an inverse graphics W by "igw".

Spaces are represented by "sp" and inverse spaces by "isp". Whenever any character is to be used more than once, the number of times it is to be used is shown before it, together with a multiplication sign. Thus "6*isp" means six inverse spaces and "(g4:4*14:g3)" would be entered as a graphic four, followed by an inverse four repeated four times, followed by a graphics three. Control codes appear with cc before the appropriate key. The are obtained by pressing Caps Shift while in Extended mode.

Where whole words are to be written in inverse letters they appear in the listings as lower-case letters. Letters to be entered in graphics mode on the Spectrum are underlined.

Inverse characters may be entered on the ZX-81 by changing to graphics mode and then typing the appropriate characters and on the Spectrum by changing to inverse video and typing the appropriate letters. Graphics characters may be entered on the ZX-81 by changing to graphics mode and then pressing symbol shift while the appropriate characters are entered. On the Spectrum graphics characters may be obtained by changing to graphics mode and then pressing the appropriate character. User-defined graphics will appear as normal letters until the program has been RUN.

OUTWIT the guards of the notorious Colditz POW camp and win your freedom in an exciting multi-game program by Peter and Tim Bennett of Leicester.

First you must escape from your cell, then negotiate a booby-trapped corridor. There are locked doors to get through, searchlights to avoid, and even when you have escaped from the castle you must still make your way back to England. A series of different games simulate all those problems. Some are easy, some are difficult, but to win them all in sequence is for the truly great escapers only.

Colditz runs on the 16K ZX-81. Do not be confused by the effect of Line 2 on Line 1 when you run the program: it is a simple security measure.

Just because you get eight draws on the Pools does not necessarily mean you scoop the jackpot. If you do one of those complicated systems with lots of different lines to check you may only end up with a handful of fourth dividends for you pains.

Touch Line Plan 32 by L M Cook of Oldham in Lancashire will not predict a winning choice but it will take out the drudgery of checking all those lines. The plan works on Littlewoods, Vernon and Zetter Pools coupons and runs on any Spectrum.

You must enter your selections according to the points they scored — 3, 2, 1.5 etc — and the program will then run through the 72 combinations and tell you what dividends, if any, you have won. Although it will only work for the specific plan, it should be possible to adapt the program for use with other systems.

DO YOU WATCH TELEVISION WITH THE SOUND TURNED OFF?

Bring life to your graphics with sound, the needed dimension to games and educational use of the Spectrum. Microspeech is easy to use and allows you to incorporate voices and sound prompts within your software and games. With simple allophones and intonation you can add an extra dimension.

Expand your Spectrum with Microslot!

Microslot is a two-way mother-board elegantly designed to allow you the freedom to incorporate as many add-ons as you wish. The sound construction will give you the scope to add further Microslots to take all the peripherals you require, and all at the same time.

Priced at just £14.95, Microslot is the gateway to flexibility of add-ons!

FORTH, Assembler and Debug to ZX Spectrum

Microsource is Currah's radical new concept in computer add-ons. Microsource allows you to enter Assembler and FORTH source languages directly into BASIC lines and run these separately or layered together in an integrated BASIC / FORTH / Machine Code program. Microsource also features full macro assembly and a comprehensive Debug facility.

At £44.50, Microsource will be an indispensable ally to all those who wish to progress to more advanced languages for the production of ultra fast and highly compact programs.

Software publishers appreciate the need for voice messages and speech. Try some of the top selling games like "LUNAR JETMAN" from Ultimate.

Send off now for details of all the software available with speech!!

Trade and Export enquiries welcome. Lifetime Guarantee.

THE QL is capable of producing stunning graphics with quite simple procedures, but if you are not used to them you may find the commands a little confusing.

Qool Graphics by Neil Sampson of Oldham in Lancashire provides a series of routines to draw a variety of patterns, using **BLOCK**, **FILL**, **CIRCLE** and **LINE** commands to produce pleasing effects on the screen.

Try running the program in both display modes in order to compare the different effects of stipple colouring in the program.

Qool

TEST DRIVE the last word in four-wheeled fury around ten different circuits in **Vroom** by Richard Judge and Stuart Harris of Scaldwell in Northamptonshire. Avoid the rocks and water hazards while picking up as many flags as you can.

Each screen is contained in its own routine, so you could write new ones easily. Vroom was written for the 48K Spectrum.

The program uses our special abbreviations for graphics characters, so please read the instructions on the first page of Program Printout before entering the listing. Characters in graphics mode are printed in a different, faint, typeface.

SUPERCHESS 3-5

GUARANTEED TO CONSISTENTLY BEAT ANY SPECTRUM OR COMMODORE 64 CHESS PROGRAM WHATSOEVER

STRONG—100 times faster, 1500 times more intelligent
FAST—from 5 secs to the highest levels, all within tournament times
PENETRATING—at tournament levels it searches at least 7 moves deep, trying tens of thousands of lines of play
FRIENDLY—keeps you informed. Ideal for the expert or as a tutor for beginners
SAVES TO MICRODRIVE TO SAVE YOU TIME

£9.95 48K SPECTRUM

- ★ Save Game & Program to Microdrive
- ★ On-screen clocks for tournament realism
- ★ Unique new way of setting hundreds of levels
- ★ All play within tournament time limits

FEATURES

- ★ Unique new way of setting levels by time gives you total control with three different options: tell the computer to match your response times, give it a time limit to play to, or give it an average time to make its moves. And you can force it to play its best move found so far...
- ★ Change sides and levels during play if required
- ★ Stop the game and change positions at any time
- ★ Set up particular games you want to try at any stage
- ★ Will recommend your best move when asked
- ★ Can be set to solve problems up to mate in four
- ★ Extensive library of opening moves
- ★ Option to determine your own display and piece colours
- ★ You can play blindfold chess
- ★ Absolutely suitable for beginners; just set the minimum move time
- ★ Fascinating self-play mode for you to study the game
- ★ TOTAL INFORMATION about the computer's thought processes, including: best line of play found so far, number of positions evaluated, depth of search, internal scoring system, display of previous moves if required, help menu if you should ever get stuck

DEDICATED TO EXCELLENCE IN THE GAME OF CHESS

NEW FOR 1985

BRIDGE PLAYER 2

THE STRONGEST BRIDGE PLAYER YET

BRIDGE TUTORS with full manual & set hands to teach you the game
Beginners £5.95 Advanced £9.95
SPECIAL OFFER
Bridge Player 2 & both tutors £19.95

£9.95 48K SPECTRUM WITH EXTENSIVE MANUAL

- ★ Play a realistic game of bridge against the computer
 - ★ Computer can play as defender or declarer
- At last, here is a program with everything the solo Bridge Player ever needed: The computer generates random hands, allows proper bidding in the ACOL system including the Stayman and Blackwood conventions, and then IT TAKES YOU ON, playing both your opponents' hands. Every feature that can be packed into the Spectrum has been included in this program to give you a really satisfying and enjoyable game of computer Bridge.

FEATURES

- ★ Versatile bidding routines give you a worthy opponent
- ★ Study your game: post-mortem facility allows rebidding and replaying of any hand
- ★ You can review the bidding or play to previous tricks while playing a hand
- ★ Or input a hand or contract of your choice to test yourself
- ★ **COMPREHENSIVE ON-SCREEN INFORMATION**
DISPLAYS: contract, tricks won so far, cards played in current and last trick, score
- ★ Option to **BIAS THE DEAL** to give you and your "partner" more high card points if you prefer to play as declarer

A REALLY STRONG OPPONENT FOR A REALLY GOOD GAME OF BRIDGE

NEW FOR 1985

ASTRONOMER

THE UNIVERSE OF STARS IN YOUR OWN PLANETARIUM

THRILLING command over the night sky from any time or place on earth
SERIOUS tool for the amateur astronomer — with excellent manual

"For those interested in the night sky it should prove fascinating"
 "User friendly"
 "Very good value"

CRASH Oct 1984

£9.95 48K SPECTRUM

Astronomer has everything in one powerful program... See the night sky of more than 1000 stars from any time or place on earth. Watch it plot the planets or draw in the constellations for you. See close-ups from the Star Atlas of 362 charts. Watch animated detail of our Solar System in motion and see how it changes with the months. Calculate everything needed for serious astronomy to a high standard of accuracy and produce your own tables to save having to buy them. Anything can be transferred to a ZX Printer.

FEATURES

- ★ Comprehensive Manual with reference sections
- ★ Suitable for serious astronomical study
- ★ Night Sky views from anywhere on earth
- ★ Works for past, present and future times
- ★ Displays over 1000 stars
- ★ Draws the constellations on your command
- ★ Plots the solar system on the night sky
- ★ Huge Star Atlas for detailed study
- ★ Shows the motion of the solar system
- ★ Calculates position for the Sun, Moon, Planets, Comets and Asteroids
- ★ Then plots them on the Night Sky or Star Chart
- ★ Displays the phases of the moon
- ★ The distance from earth of any object
- ★ Sidereal time and rising and setting times
- ★ Ephemeris section: generate and print your own tables
- ★ Fully-compatible with ZX Printer

NEW FOR 1985

PINBALL WIZARD

FOR COMMODORE 64 AND ANY SPECTRUM

Superb, colourful fast-action graphics and sound give this game the feel of a real arcade pin-table. Realistic launch, flippers, bumpers, high-score, bonus scores and freeball features. Be a Wizard!

"... I thought that a few minutes would suffice, and then found that a couple of hours had passed and I was still at it. Excellent... Pinball Wizard has it made."

CRASH MAGAZINE

"A brilliant idea that's totally absorbing and so addictive..."

YOUR SPECTRUM

"The display is well-designed and colourful and ball movement is very realistic."

MAIL ORDER

Simply state which programs and send cheque, postal order or Access number (with expiry date). Telephone for instant credit-card orders. Send SAE for catalogue and return postage for submitted programs.

CP SOFTWARE, Dept (xxx), 2 Glebe Road, Uxbridge, Middlesex UB8 2RD
tel. 0895 31579 (also dealer hotline)

DELIVERY by soonest post. Post free in UK. Europe add 80p per program. All other places add £1 per program for surface mail or for Airmail add £2 for first program and 50p for each additional.

SUPERCODE III

FOR 48K SPECTRUM & SPECTRUM+

150 ROUTINES
 100% MICRODRIVE COMPATIBLE

NEW FOR 1985

With 150 ROUTINES and 100% MICRODRIVE COMPATIBILITY this has to be the ultimate Spectrum toolkit. It gives you the power to do everything you always dreamed of with your Spectrum in your own BASIC or M/C programs. Born of the earlier Supercodes (which themselves received 5 star reviews) we can claim confidence that we have packed absolutely everything into this State Of The Art development. With Interface 1 it transfers easily to microdrive and is recognised by Sinclair as fully compatible. Needs no special knowledge to operate and comes with a comprehensive manual.

FEATURES

- ★ Unique Access Program lets you INDEX/ LIST/TEST/TAILORE/RUN/RELOCATE/SAVE (to tape or microdrive with new or default name)/VERIFY automatically
- ★ Options include EXAMPLE/REPEAT/JUMP/AGAIN/CONT/Tfr/DEMO/DIAGNOSIS/MOVE
- ★ 100% menu-driven with on-screen training
- ★ Brilliant user manual
- ★ Routines guaranteed SHORTEST AND FASTEST for all applications

ROUTINES INCLUDE

SUPER MICRODRIVE CATALOGUE-TRACE (with 256 preset program speeds) **SCREEN COMPRESS** FOR ADVENTURES **ON ERROR GOTO-DOZENS OF RS232 AND MICRODRIVE ROUTINES-ON BREAK GOTO-TO THE SUPER-RENUMBER** (Does everything) **VARIABLE LIST-STRING SEARCH-REPLACE-PAINT FILL-5 SUPER PROGRAMMABLE SOUND EFFECTS-RECORD-REPLAY SOUND/MUSIC-CONFUSE+UNCONFUSE LISTING-REMIKIL-PROGRAM CONTRACT/PAND-PROGRAM ANALYSE-NUMBER-VAL SCOMPRESS-CHARACTER SWOP/SCRAMBLE/INVERT/REVERSE/ROTATE-WHOLE NEW CHARACTER SET (Sc-Fi)-FLASH+BRIGHT ON/OFF/SWOP-MEMORY FREE-PROGRAM LENGTH-BLOCK LINE+ MEMORY ERASE/FILL/COPY-APPEND CURSOR-SCREEN SAVE/LOAD/SWOP/MERGE/FILL/SEARCH-HEX —DEC+DEC-HEX CONVERTERS-REMIKIL-DATAFILL-GRID-INK+PAPER CHANGE-ATTRIBUTE SWOP/FILL/INVERT/RESET TAPE HEAD READER-PROGRAM PROTECT-PROGRAM BREAK-IN-HEADERLESS FILE CREATE-AUTORUN CODE-PROGRAM AS CODE TAPE COPIER-DEFEAT MICRODRIVE DIAGNOSIS-FAST LOAD MICRODRIVE-SURE SAVE MICRODRIVE-ADAPT TO MICRODRIVE-SURE CLOSE//STRINGS+PROGRAM CASE CHANGE/SWOP-HEX LOADER-ANALYSE MEMORY-LINE ADDRESS-STANDRAW-FREE SCROLLER-24 LINE PRINTING-LOWER SCREEN CLS-NEW UDG-PROGRAMMABLE BORDER EFFECTS-REMOVE COLOUR-RIPPLE+SHUTTER SCROLLSIL+R) SCROLL PIXELS/CHARACTER/ATTRIBUTES, SINGLY OR JOINTLY, UP/DOWN/LEFT/RIGHT, WITH OR WITHOUT WRAP-AROUND, IN A USER DEFINED WINDOW OF ANY SIZE POSITIONED ANYWHERE ON THE SCREEN-SPRITE EFFECTS...and many more besides.**

£12.95 48K SPECTRUM WITH EXTENSIVE MANUAL

THE AGE OF THE R.A.T

CONVENTIONAL JOYSTICKS ARE DEAD!

The Cheetah Remote Action Transmitter is the most sophisticated computer controller available.

It has these features:

- Infra Red transmission – so there are no leads trailing across the living room. Just sit back in your chair up to 30 feet from your machine.
- Touch control – no moving parts, extremely fast, long life.
- No extra software required.
- Can be used with all Cheetah RAT/Kempston compatible software.
- Fits comfortably in your hand for long play periods.
- Comes complete with receiver/interface unit which simply plugs into the rear of your Spectrum.
- Compatible with all Sinclair/Cheetah peripherals via the rear edge connector.

Simply incredible at £29.95 including VAT and p & p.

Dealer enquiries welcome. Export orders at no extra cost.

Send cheque/p.o now to:

Cheetah Marketing Ltd. (Dept. SU), 24 Ray Street, London EC1R 3DJ. phone 01-833 4909

Cheetah products are also available from branches of

John Menzies Boots WHSMITH Rumbelows
and all good computer shops.

★ NOW AVAILABLE FOR THE AMSTRAD CPC 464!!

WIN THE POOLS?

Amstra-Draw for the Amstrad CPC 464£9.95 inclusive
(Cheques/P.O.s payable to B. S. McALLEY)

We dispatch every Monday with the database made up to include all matches up to the date of dispatch.

SPECTADRAW (Dept SU), 1 Cowleaze, Chinnor, Oxford OX94TD.
(Tel: 0844-52426)

BETA BASIC 1.8

ENHANCED BASIC FOR SPECTRUM 48K
FOR GRAPHICS – STRUCTURED PROGRAMMING
– DATA HANDLING

Release 1.8 is more powerful than ever! We don't have space to do this program justice – if you can't believe the ad, send us a large S.A.E. for further information.

Features: Commands are single-entry keywords in graphics mode. Syntax is checked on entry. Fully compatible with Spectrum Basic. Microdrive compatible. Comprehensive manual.

NOTE: Release 1.0 is still available for 16/48K Spectrum at £11.00.

ALTER screen colours (general or specific).
AUTO line numbering
BREAK out of code loops
CLOCK digital clock
CURSOR CONTROL CODES allow strings to have complex shapes
DEF KEY user definable keys
DELETE a block of lines
DO-LOOP structure
DPOKE double poke
EDIT specified line
ELSE (used with IF... THEN)
EXIT leave DO-LOOP

FILL enclosed area with specified ink or paper.
GET wait for keypress
JOIN two program lines
KEYIN a string
KEYWORDS new keywords on/off
LISTLIST line TO line
USED (used with GOTO, GOSUB)
ON ERROR trap errors (with LINE, STAT and ERROR)
PLOT a string (may contain cursor control codes)
POKE a string
POP Basic's stack
PROC, DEF PROC, END PROC (for named procedures)

RENUM versatile renumber
ROLL all or part of screen in any direction by specified number of pixels, with or without attributes
SCROLL like ROLL, but without wrap round
SORT arrays (very fast)
SPLIT program lines
TRACE program execution
UNTIL used with DO or LOOP
USING used with PRINT
WHILE used with DO or LOOP
XOS, YOS move PLOT scale
XRG, YRG change PLOT scale

FUNCTIONS

AND (bit-by-bit)
BINE decimal to binary
CHARN number to 2 characters
COSR fast cosine
DEC hexadecimal to decimal
DPEK double PEEK
FILL filled area

HEX decimal to hexadecimal
INSTING string search
MEM free memory
MEMORY% all of memory as a string
MOD modulus
NUMBER 2 characters to number
OR (bit-by-bit)

RNDM fast RND
SCNR recognises user graphics
SINE fast sine
STRING% repeats strings
TIME% current time
USING% formats numbers
XOR (bit-by-bit)

Only £11.00 inclusive! (Upgrade price for Release 1.0 owners is £4.00. This includes a 12-page supplement to your manual. Please quote date of purchase. If you did not purchase from us, state supplier and return original cassette.)

Please send me:
Beta Basic, Release 1.8. Payment of £11.00 is enclosed.
(or £11.50 for foreign orders). Cheques payable to BETASOFT.

I don't believe it! Please send me full details of Beta Basic 1.8. I enclose a stamped addressed envelope.

More exciting games for your ZX

Athlete

So you didn't make the Olympics? Never mind, here's a selection of track and field events where you can show the selectors how you compare against some tough opposition. Sprints (100m & 400m), Hammer Throw, Hurdles (110m & 400m).

Super Bridge

For beginners and experts alike. Designed to give above average players a good run for their money and to give beginners an excellent introduction without the worry of an impatient partner.

Make Music

A music synthesizer program designed to compose 3-part harmonies when used with the Zon, Fuller and Tamedata sound boxes or any other using the AY-3-8912 chip where the OUT command is known. Brilliant! - ZX Computing.

Buffer Adventure

Featuring the real-life characters who work at Buffer Micro. Dare you unravel the mysteries behind the shop? Are the people who serve you quite as weird as they seem? An amusing, pun-laden adventure.

Mysterious Fairground

All the fun of the fair, plus unimaginable horrors in the House of Horror and the Ghost Train before you can find the five items of treasure hidden somewhere in the Fairground.

Pools Predictions

Score draws, no-score draws, home and away wins in this menu-driven program to help you fill in that winning coupon. English, Scottish, Irish and Australian leagues for all year round success.

Racing Predictions

Covers the flat racing season at the touch of the keyboard – all the major courses catered for in this user friendly prediction program. Pick the first three home with confidence – not a pun!

Card Games

CRIBBAGE is the most fascinating of this series, produced in response to Cribbage addicts' requests. Also on the same cassette are PAIRS, BINGO and PATIENCE.

Loony Bin

Mad adventure requiring cool logical thinking to escape from the asylum and travel the world following the clues. Uses all but 8 bytes of the Spectrum's 48k memory.

All prices include VAT. Add 75p p&p or call in person at Buffer. Trade enquiries welcome. Visa. Access. American Express. Diners Club.

FREE
Blank Tape
with every purchase

Please send me the following games:

AFGHAN ATTACK

**A 96K PURE TEXT MACHINE CODE ADVENTURE FOR
THE 48K SPECTRUM (IN TWO PARTS)**

A large build up of Soviet troops is forming on the South Eastern Pakistan border, with probable hostile intentions. Troops and supplies travel the fragile Eastern Kabul road through unoccupied territory. Your role is to disrupt these troop movements, harass supplies and prevent the Soviets from attaining their objectives. You have British Paratroopers; ground to air missiles for attacking their airfield and destroying helicopters; plus rebel guerillas to lay ambush on troops and convoys.

Please send me copy(ies) of 'AFGHAN ATTACK'
at £9.95 each. I enclose a cheque/P.O. made payable
to 'Southern Software' to the value of

Take ship for the New World and found an empire in a thrilling simulation of the struggles of European nations to compete for a share of America's riches in the 15th Century.

Columbus, by Nicholas Holgate, was a runner up in the 1984 Cambridge Awards competition. The game is for two to five players, but should prove entertaining for one.

Enter listing 1 first, and SAVE it with SAVE "col" LINE 10. Then Enter listing 2 and SAVE with SAVE "Columbus" LINE 3. Then the first listing will automatically RUN and LOAD the second. The program runs on the 48K Spectrum.

Each turn begins with a financial statement, following which you may choose a number of options.

Ships allows you to explore, build ships and improve their design. It also allows you to engage in piracy, invade an opponent, or seek to blockade his ports if at war. A further option is to protect trade or move troops in convoy.

Soldiers gives four options. You may explore, attack or defend in the New World. You may also recruit new troops.

Spies allows you to examine certain details of your rivals' progress and plans.

Crop changes allows you to instruct your colonists on what products they should aim to send home. What you decide will depend on the type of land colonised.

Tax changes may be used to increase revenue, but high taxes can deter colonists.

War allows you to plot an attack on a player the following turn. A declaration of war will only be announced on that turn.

The different types of land are colour coded. White indicates tundra or desert, of territorial significance only. Yellow is plains, the best for growing crops. Green is forest producing timber thus cutting ship-building costs. Purple may produce silver or gold.

Some land is inhabited, and you will have to deal with the natives there. You can trade with them or oppress them.

At the end of each round, all players may see a report on the outcome of trading and wars, along with an indication of who is winning. The game ends when one player has achieved colonial domination, but that player may not be the overall winner.

Columbus uses our special abbreviations for graphics characters, so please read the instructions on the first page of Program Printout.

QUALITY CONTROL FROM CREATIVE SPARKS ON SPECTRUM 48K

**For those
who demand
excellence**

STAGECOACH

A western action game for your Spectrum which really does provide something quite different and exciting. You are Kidd Rivers, the hero of the game and you must leap aboard the runaway stage and guide it safely over the plains and through the treacherous mountains. Then just as you thought you were safe, fight off the attacking Indians.

BLACK HAWK

You're flying the world's deadliest aircraft, however it would appear that your Command Centre has just sent you on the world's deadliest mission.

The ultimate in strategic action. This 100% machine code game offers the player two full graphic scrolling screens with over 30 levels of play.

DELTA WING

Delta Wing is an advanced flight combat simulator. It has been designed to give an excellent 'feel' for the tumble and roll of high speed flight. With 15 separate controls to monitor and incoming enemy planes to be dealt with, this program takes you and your Spectrum to the limits.

Delta Wing also allows TWO Spectrum computers to play against each other through the use of two Interface 1's.

SAGA 1 EMPEROR

THE KEYBOARD FOR ZX SPECTRUM COMPUTERS

- * **EASY FITTING**
- * **PLEASURE TO USE**
- * **LONG LASTING**

The Saga 1 Emperor, equipped with 67 keys, is a carefully designed replacement keyboard incorporating many special functions for the popular Spectrum Computer. For business or pleasure, the Emperor will make your computing time more productive and

enjoyable. The SAGA 1 Emperor will enable you to use the Spectrum as a powerful programming tool easier and faster.

The style is easy:- for your benefit, the SAGA 1 Emperor has been designed to ensure that available Spectrum Peripherals will fit in the usual manner.

The assembly of the keyboard is simple — and fast. No soldering required, so that within just 5 minutes you can replace your current ZX Spectrum with the new SAGA 1 Emperor.

AND ALL THIS FOR JUST £54.95 (inc. VAT)

SAGA P.C.!

Your very own Personal Carrier, partitioned to neatly accommodate your Spectrum, Saga 1 Emperor and peripherals; Tape Recorder, Power Supply, Cables, manuals and cassettes. Of solid and attractive construction the P.C. is ideal for storing and transporting your computer accessories. The case uses a strong double stitched and bound Black Calf Vinyl with a tough thick ABS inner compartment, leather buckles and a strong handle. Only **£26.95** (inc. VAT).

DUSTCOVER

Another top quality product, this expertly produced long-lasting bound and sewn dustcover has been specifically designed for the SAGA 1 Emperor, which will keep everything looking neat and dust free. Only **£4.95** (inc. VAT).

THE COLLECTION

SOUNDBOOST

Hear that keyboard click with a SAGA SOUNDBOOST. The SAGA SOUNDBOOST is a tiny electronic circuit which considerably enhances the sound volume and quality of the Spectrum sound output. Adjustable from a whisper to a roar, the SOUNDBOOST provides added realism and excitement for games players and security for programmers (Hear that Keyboard Click!). No cutting, no soldering — just connect. Only **£9.50** (inc. VAT).

FLEXICABLE

Developed to relieve your Spectrum from the pressure of life, to fit your Spectrum and your add-ons taking the load with ease. By popular demand we now have two versions of the 9 inch FLEXICABLE available to suit your needs.

Male-Female FLEXICABLE — £12.45
Female-Female FLEXICABLE — £9.50
Converter PCB — £2.95

THE COLLECTION

The latest addition to our product range is The Collection, providing you with three money saving action packed specials containing quality products — an ideal gift.

COLLECTION 1 — SAVE £10.00!!

r.r.p.	£53.85
Our special price	£43.85
includes: Saga Personal Carrier	£26.95
Soundboost	£9.50

FORTY NINER

In 1849 the Great American Gold Rush started. Almost everyone who could sold up everything and dashed to the west coast to look for this precious metal – including you!

You must excavate this precious metal – but can you survive the giant rats and that vicious Gremlin which will come to infest your mine? Can you trick the snakes into leaving their comfortable nests and destroy the rats for you? Can you keep the Gremlin at bay?

Riches await you – but so do the hazards!

ROCKET MAN

Get rich quick by collecting Diamonds that are simply lying there waiting for you!

Oh... I forgot to mention that there are one or two problems!

There is an expanse of shark infested water between you and the Diamonds and a strange breed of Bubble that seems hell bent on getting you in it! Somehow you must cross it...

You have a Rocket Pack to help you (a Vulture on higher levels) but you must rush around the platforms and ladders collecting cans of fuel (legs of lamb with the Vulture) and cursing that weird Bubble. Once you have enough fuel then it's Chocks Away!

Oh... but don't run out of fuel on the way – otherwise it's... SPLASH!

Z-XTRICATOR

A long time ago, in a galaxy far, far, away a terrible war took place between two hostile races. Any prisoners taken could not expect to live very long in the hands of their captors. Their only hope lay with a group of valiant warriors – the XTRICATORS – whose task it was to rescue fellow beings from the alien planet's surface. You are about to take on the role of such a warrior...

Please send me:
